

Applied Materials Inc.

2025 CDP Corporate Questionnaire 2025

Word version

Important: this export excludes unanswered questions

This document is an export of your organization's CDP questionnaire response. It contains all data points for questions that are answered or in progress. There may be questions or data points that you have been requested to provide, which are missing from this document because they are currently unanswered. Please note that it is your responsibility to verify that your questionnaire response is complete prior to submission. CDP will not be liable for any failure to do so.

Contents

C1. Introduction

(1.1) In which language are you submitting your response?

Select from:

☒ English

(1.2) Select the currency used for all financial information disclosed throughout your response.

Select from:

☒ USD

(1.3) Provide an overview and introduction to your organization.

(1.3.2) Organization type

Select from:

☒ Publicly traded organization

(1.3.3) Description of organization

Applied Materials, Inc. is the leader in the materials engineering solutions used to produce virtually every semiconductor and advanced display in the world. We are experts in the design, development, production, and servicing of the critical wafer fabrication and display fabrication tools our customers need to manufacture semiconductors and displays. Our customers' products are used in a wide variety of products such as personal computing devices, mobile phones, artificial intelligence (AI) and data center servers, automobiles, connected devices, industrial applications and consumer electronics. We have the semiconductor capital equipment industry's most comprehensive portfolio of products. This breadth allows us the ability to connect and co-optimize technologies across our portfolio, enabling our customers to achieve superior results as manufacturing semiconductors and displays is becoming increasingly complex. Semiconductors provide the foundation for advances in technology that are reshaping the global economy, including artificial intelligence, internet of things, robotics, electric and autonomous vehicles, and clean energy. As of the end of Fiscal Year 2024 (FY24) Applied Materials employed approximately 35,700 regular fulltime employees and owned a total of approximately 9 million square feet of space and leased another 4.9 million square feet of space for offices, plants, warehouses and research and development centers.

[Fixed row]

(1.4) State the end date of the year for which you are reporting data. For emissions data, indicate whether you will be providing emissions data for past reporting years.

(1.4.1) End date of reporting year

10/31/2024

(1.4.2) Alignment of this reporting period with your financial reporting period

Select from:

☒ Yes

(1.4.3) Indicate if you are providing emissions data for past reporting years

Select from:

☒ Yes

(1.4.4) Number of past reporting years you will be providing Scope 1 emissions data for

Select from:

☒ 5 years

(1.4.5) Number of past reporting years you will be providing Scope 2 emissions data for

Select from:

☒ 5 years

(1.4.6) Number of past reporting years you will be providing Scope 3 emissions data for

Select from:

☒ 3 years

[Fixed row]

(1.4.1) What is your organization's annual revenue for the reporting period?

(1.5) Provide details on your reporting boundary.

	Is your reporting boundary for your CDP disclosure the same as that used in your financial statements?
	Select from: <input checked="" type="checkbox"/> Yes

[Fixed row]

(1.6) Does your organization have an ISIN code or another unique identifier (e.g., Ticker, CUSIP, etc.)?

ISIN code - bond

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ No

ISIN code - equity

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ No

CUSIP number

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ Yes

(1.6.2) Provide your unique identifier

038222105

Ticker symbol

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ Yes

(1.6.2) Provide your unique identifier

AMAT

SEDOL code

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ No

LEI number

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ No

D-U-N-S number

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ No

Other unique identifier

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ No

[Add row]

(1.7) Select the countries/areas in which you operate.

Select all that apply

☒ China

☒ India

☒ Italy

☒ Japan

☒ Canada

☒ Finland

☒ Germany

☒ Ireland

☒ Malaysia

☒ Singapore

☒ United Kingdom of Great Britain and Northern Ireland

☒ France

☒ Greece

☒ Israel

☒ Austria

☒ Belgium

☒ Netherlands

☒ Philippines

☒ Taiwan, China

☒ Republic of Korea

☒ United States of America

(1.8) Are you able to provide geolocation data for your facilities?

	Are you able to provide geolocation data for your facilities?	Comment
	Select from: <input checked="" type="checkbox"/> Yes, for some facilities	<i>We are providing locations for the two key facilities identified in high water risk regions specified in our disclosure</i>

[Fixed row]

(1.8.1) Please provide all available geolocation data for your facilities.

Row 1

(1.8.1.1) Identifier

Rehovot, Israel

(1.8.1.2) Latitude

31.892773

(1.8.1.3) Longitude

34.811272

(1.8.1.4) Comment

Applied Materials has 1 campus containing 3 buildings in Rehovot, Israel. Applied manages all aspects of water use and discharge properly and according to regulatory requirements. Any risks that may interrupt our operations are evaluated and mitigated through our business continuity planning.

Row 2

(1.8.1.1) Identifier

Xi'an, China

(1.8.1.2) Latitude

34.3416

(1.8.1.3) Longitude

108.9398

(1.8.1.4) Comment

Applied Materials has one campus containing 2 buildings in Xi'an, China. These buildings consist of lab and office space. The site manages all aspects of water use and discharge properly and according to regulatory requirements. Water-stress-related impacts are unlikely to cause substantive financial impact but could interrupt strategic R&D operations. Any risks that may interrupt our operations are evaluated and mitigated through our business continuity planning.

[Add row]

(1.24) Has your organization mapped its value chain?

(1.24.1) Value chain mapped

Select from:

☒ Yes, we have mapped or are currently in the process of mapping our value chain

(1.24.2) Value chain stages covered in mapping

Select all that apply

☒ Upstream value chain

☒ Downstream value chain

(1.24.3) Highest supplier tier mapped

Select from:

☒ Tier 1 suppliers

(1.24.4) Highest supplier tier known but not mapped

Select from:

☒ Tier 2 suppliers

(1.24.7) Description of mapping process and coverage

Applied sends an annual survey to our top 80% spend suppliers that includes information gathering on sub-tier suppliers. Due to the highly sensitive IP nature of our business and industry, we are unable to disclose further details of our supply chain composition.

[Fixed row]

(1.24.1) Have you mapped where in your direct operations or elsewhere in your value chain plastics are produced, commercialized, used, and/or disposed of?

	Plastics mapping	Value chain stages covered in mapping
	<p>Select from:</p> <p><input checked="" type="checkbox"/> Yes, we have mapped or are currently in the process of mapping plastics in our value chain</p>	<p>Select all that apply</p> <p><input checked="" type="checkbox"/> Upstream value chain</p> <p><input checked="" type="checkbox"/> Downstream value chain</p>

[Fixed row]

C2. Identification, assessment, and management of dependencies, impacts, risks, and opportunities

(2.1) How does your organization define short-, medium-, and long-term time horizons in relation to the identification, assessment, and management of your environmental dependencies, impacts, risks, and opportunities?

Short-term

(2.1.1) From (years)

0

(2.1.3) To (years)

5

(2.1.4) How this time horizon is linked to strategic and/or financial planning

Most of Applied's strategic and financial planning occurs within this timeframe.

Medium-term

(2.1.1) From (years)

6

(2.1.3) To (years)

10

(2.1.4) How this time horizon is linked to strategic and/or financial planning

This timeframe is considered longer-range for Applied's strategic and/or financial planning; however, the applicability of this time horizon depends on what aspect of the business is being considered. For example, planning for infrastructure/construction projects may align with this time horizon.

Long-term

(2.1.1) From (years)

11

(2.1.2) Is your long-term time horizon open ended?

Select from:

☒ No

(2.1.3) To (years)

30

(2.1.4) How this time horizon is linked to strategic and/or financial planning

This time horizon is primarily used for considerations around environmental dependencies, impacts, risks, and opportunities.
[Fixed row]

(2.2) Does your organization have a process for identifying, assessing, and managing environmental dependencies and/or impacts?

	Process in place	Dependencies and/or impacts evaluated in this process
	Select from: <input checked="" type="checkbox"/> Yes	Select from: <input checked="" type="checkbox"/> Both dependencies and impacts

[Fixed row]

(2.2.1) Does your organization have a process for identifying, assessing, and managing environmental risks and/or opportunities?

	Process in place	Risks and/or opportunities evaluated in this process	Is this process informed by the dependencies and/or impacts process?
	Select from: <input checked="" type="checkbox"/> Yes	Select from: <input checked="" type="checkbox"/> Both risks and opportunities	Select from: <input checked="" type="checkbox"/> Yes

[Fixed row]

(2.2.2) Provide details of your organization’s process for identifying, assessing, and managing environmental dependencies, impacts, risks, and/or opportunities.

Row 1

(2.2.2.1) Environmental issue

Select all that apply

- ☒ Climate change
- ☒ Water

(2.2.2.2) Indicate which of dependencies, impacts, risks, and opportunities are covered by the process for this environmental issue

Select all that apply

- ☒ Dependencies
- ☒ Impacts
- ☒ Risks
- ☒ Opportunities

(2.2.2.3) Value chain stages covered

Select all that apply

- ☒ Direct operations
- ☒ Upstream value chain
- ☒ Downstream value chain

(2.2.2.4) Coverage

Select from:

- ☒ Partial

(2.2.2.5) Supplier tiers covered

Select all that apply

- ☒ Tier 1 suppliers

(2.2.2.7) Type of assessment

Select from:

- ☒ Qualitative and quantitative

(2.2.2.8) Frequency of assessment

Select from:

- ☒ Annually

(2.2.2.9) Time horizons covered

Select all that apply

- ☒ Short-term
- ☒ Medium-term
- ☒ Long-term

(2.2.2.10) Integration of risk management process

Select from:

- ☒ Integrated into multi-disciplinary organization-wide risk management process

(2.2.2.11) Location-specificity used

Select all that apply

- ☒ Site-specific
- ☒ Local
- ☒ National

(2.2.2.12) Tools and methods used

Commercially/publicly available tools

- ☒ RBA Country Risk Assessment Tool
- ☒ WRI Aqueduct

Enterprise Risk Management

- ☒ Internal company methods
- ☒ Stress tests

International methodologies and standards

- ☒ IPCC Climate Change Projections
- ☒ ISO 14001 Environmental Management Standard
- ☒ Life Cycle Assessment

Other

- ☒ Desk-based research
- ☒ External consultants
- ☒ Materiality assessment
- ☒ Scenario analysis

(2.2.2.13) Risk types and criteria considered

Acute physical

- ☒ Drought
- ☒ Wildfires
- ☒ Heat waves
- ☒ Cold wave/frost
- ☒ Cyclones, hurricanes, typhoons
- ☒ Flood (coastal, fluvial, pluvial, ground water)
- ☒ Storm (including blizzards, dust, and sandstorms)

Chronic physical

- ☒ Changing wind patterns
- ☒ Declining water quality
- ☒ Water stress

Policy

- ☒ Carbon pricing mechanisms
- ☒ Changes to national legislation

Market

- ☒ Changing customer behavior

Reputation

- ☒ Increased partner and stakeholder concern and partner and stakeholder negative feedback

Technology

- ☒ Transition to lower emissions technology and products

Liability

- ☒ Non-compliance with regulations

(2.2.2.14) Partners and stakeholders considered

Select all that apply

- ☒ Customers
- ☒ Employees
- ☒ Investors
- ☒ Suppliers
- ☒ Regulators

- ☒ Local communities
- ☒ Water utilities at a local level

(2.2.2.15) Has this process changed since the previous reporting year?

Select from:

- ☒ No

(2.2.2.16) Further details of process

In FY2024 Applied refined its climate and water risk and opportunities assessment and scenario analysis with support from an external consultant. The process built on top of the more comprehensive assessment that was conducted the year prior, which evaluated key dependencies, impacts, risks, and opportunities across the business. Identification process: •Engaging stakeholders through interviews, workshops, and surveys. •Developing a list of risks and opportunities using a combination of internal documentation, peer benchmarking, industry guidance, and desktop research •Refining an initial universe of climate-related risks and opportunities to 15 relevant to Applied through a workshop and stakeholder survey. Assessment process: •The criteria used to assess key risks and opportunities included the scale, scope, likelihood, and mitigation capability. •Physical and transition risks were assessed across all three time horizons •Two future pathways were considered for the climate scenario analysis: oLow Carbon Pathway: Assumes regulation and collective action will limit the greatest physical impacts of climate change by keeping global temperature increase below 2 Celsius oHigh Carbon Pathway: Assumes low collective action against climate change and a greater degree of global warming. •Physical climate risk: Exposure to 9 hazards was assessed for sites representing over 80% of our footprint oExposure to the hazards was assessed under two IPCC-aligned scenarios (SSP1-RCP2.6 and SSP5-RCP8.5) •Water risk was assessed through a site-level water-stress analysis oThe analysis used the WRI Aqueduct 3.0 water risk framework to project future water stress under three scenarios and medium and long-term time horizons. oThis was supplemented by qualitative analysis of three other elements of water risk: power supply, water quality, and water-related conflict. •Transition risks considered carbon pricing, regulations on process chemicals, R&D capabilities, product capabilities, and customer demand shifts. •Quantitative and qualitative analysis results were reviewed and refined through the stakeholder engagement process •In addition to this analysis, climate-related risks are evaluated by executives relative to other multi-disciplinary company-wide risks in Applied's enterprise risk management annual survey. Management of risks and opportunities: •Management is shared across various stakeholders whose roles and responsibilities tie to the related risk or opportunity. These stakeholders participate throughout the assessment process and are aware of the findings. For example, acute physical site-level risks are managed by a core team of global emergency response, business continuity, and local facilities personnel. •Transition risks such as the monitoring and preparation for new climate-related legislation / regulations such as those recently enacted in Europe, the UK, California, and the U.S. are managed and addressed by multi-stakeholder teams including Legal, Government Affairs, EHS, Sustainability, Supply Chain, Global Trade, Product teams, and any other teams relevant to the regulation. •Market and Technology-related issues are managed by Applied's Semiconductor Products Group, which includes a team specialized in sustainability and deploying solutions that enable customers to reduce their climate impacts associated with semiconductor manufacturing.

[Add row]

(2.2.7) Are the interconnections between environmental dependencies, impacts, risks and/or opportunities assessed?

(2.2.7.1) Interconnections between environmental dependencies, impacts, risks and/or opportunities assessed

Select from:

☒ Yes

(2.2.7.2) Description of how interconnections are assessed

Applied's environmental materiality assessment process is the primary mechanism through which dependencies, potential impacts, risks and opportunities are identified and prioritized across environmental issues. Environmental materiality is evaluated through a structured internal stakeholder engagement process as well as using the Datamaran ESG platform, which screens various external data sources to identify material ESG issues specific to Applied's industry and key external stakeholders (competitors, customers, regulators, etc.). This blended approach enables the company to bring together a wide set of data inputs into the assessment process to ensure that interconnections are sufficiently evaluated. The interconnections and dependencies amongst the risks, opportunities and impacts analyzed in the annual climate and water risk assessment were considered and discussed throughout the stakeholder engagement process. A diverse group of stakeholders was engaged, representing various parts of the business (Finance, Legal, EHS, Business Continuity (BCP), Facilities, Supply Chain, Product, Sustainability, and others) to ensure interconnections could be identified through different viewpoints. Senior leadership stakeholders were also engaged to ensure that interconnections and dependencies could be sufficiently identified. These considerations were factored into the identification and prioritization of risks and opportunities – the areas where there were the greatest interdependencies and potential impacts drove the prioritization of those issues.

[Fixed row]

(2.3) Have you identified priority locations across your value chain?

(2.3.1) Identification of priority locations

Select from:

☒ Yes, we have identified priority locations

(2.3.2) Value chain stages where priority locations have been identified

Select all that apply

☒ Direct operations

☒ Upstream value chain

(2.3.3) Types of priority locations identified

Sensitive locations

- ☒ Areas of limited water availability, flooding, and/or poor quality of water

(2.3.4) Description of process to identify priority locations

As part of Applied's physical climate and water risk assessment process, Applied's top site locations (representing over 80% of our footprint) were assessed for water-stress-related risks across varying scenarios. The analysis used the WRI Aqueduct 3.0 water risk framework to project future water stress under three scenarios (SSP2-RCP4.5, SSP2-RCP8.5, and SSP3-RCP8.5) and medium-term and long-term time horizons. Through this analysis, site locations with the greatest exposure to water-related risks (located in regions of "High" or "Extremely High" water stress) including water supply, quality, and potential flooding, were identified. Additionally, Applied uses the RBA's RMI Global Risk Map to review the risk scores of our suppliers. The risk score considers a variety of categories, including water-related risk. Supplier sites are identified based on the water stress index score (which is assessed via the WRI Aqueduct database) – those scoring in the higher-risk score threshold that fall within the top 80% of spend are prioritized for further assessment and engagement. Additionally, Applied uses the RBA's RMI Global Risk Map to review the risk scores of our suppliers. The risk score considers a variety of categories, including water-related risk. Supplier sites are identified based on the water stress index score (which is assessed via the WRI Aqueduct database) – those scoring in the higher-risk score threshold that fall within the top 80% of spend are prioritized for further assessment and engagement.

(2.3.5) Will you be disclosing a list/spatial map of priority locations?

Select from:

- ☒ Yes, we will be disclosing the list/geospatial map of priority locations

(2.3.6) Provide a list and/or spatial map of priority locations

2.3-priority locations-CDP-2025.docx

[Fixed row]

(2.4) How does your organization define substantive effects on your organization?

Risks

(2.4.1) Type of definition

Select all that apply

- ☒ Qualitative

☒ Quantitative

(2.4.2) Indicator used to define substantive effect

Select from:

☒ Indirect operating costs

(2.4.3) Change to indicator

Select from:

☒ % increase

(2.4.4) % change to indicator

Select from:

☒ 1-10

(2.4.6) Metrics considered in definition

Select all that apply

☒ Frequency of effect occurring

☒ Time horizon over which the effect occurs

☒ Likelihood of effect occurring

(2.4.7) Application of definition

Applied Materials defines substantive financial or strategic impacts as those that could materially and adversely affect Applied Materials' business, financial performance, customer, and supplier relationships, and/or enhance the company's reputation. Our climate risk assessment process includes the evaluation and prioritization of emerging and ongoing risks, which would be considered substantive based on factors like probability, magnitude, and duration, depending on the scenario. The exact thresholds used to determine whether an impact is substantive are specific to the risk type, scenarios, and time horizons evaluated; thus, generalizations on specific thresholds are challenging to define. The provided range is based on current business conditions and our understanding of the potential operating expense implications of identified physical and transition risks. For example, for physical risks related to extreme heat exposure, we evaluated the projected frequency of days exceeding the local 99th percentile temperature and count of three-day periods with high temperatures above 35°C and low temperatures above 24°C. The assessment covered the short- medium- and long-term time horizons (as defined in 2.1) and the relative likelihood of such conditions occurring at various site locations. Climate and water-related risks are also evaluated through a structured internal environmental materiality engagement process, as well as by using the Datamaran ESG platform, which screens various external data sources to identify material ESG issues specific to Applied's industry and key external stakeholders

(competitors, customers, regulators, etc.). To determine materiality, topics are rated based on their potential impact to the business and importance to key external stakeholders. We also view issues through a double-materiality lens, which assesses the ESG factors likely to affect our business (e.g., cause financial impacts) as well as the factors that our activities may affect.

Opportunities

(2.4.1) Type of definition

Select all that apply

- ☒ Qualitative
- ☒ Quantitative

(2.4.2) Indicator used to define substantive effect

Select from:

- ☒ Revenue

(2.4.3) Change to indicator

Select from:

- ☒ % increase

(2.4.4) % change to indicator

Select from:

- ☒ 1-10

(2.4.6) Metrics considered in definition

Select all that apply

- ☒ Frequency of effect occurring
- ☒ Time horizon over which the effect occurs
- ☒ Likelihood of effect occurring

(2.4.7) Application of definition

Applied Materials defines substantive financial or strategic opportunities as those that could materially and positively affect Applied Materials' business, financial performance, continuity of operations, and/or cause reputational harm. Our climate risk and opportunity assessment processes allow us to evaluate and prioritize the impact of emerging and ongoing opportunities, which would be considered substantive based on factors like probability, magnitude, and duration, depending on the scenario. The exact thresholds used to determine whether an impact is substantive are specific to the opportunity type, scenarios, and time horizons evaluated; thus, generalizations on specific thresholds are challenging to define. The provided range is based on current business conditions and our understanding of the potential revenue implications of identified opportunities. Climate and water-related opportunities are evaluated through a structured internal environmental materiality engagement process, as well as by using the Datamaran ESG platform, which screens various external data sources to identify material ESG issues specific to Applied's industry and key external stakeholders (competitors, customers, regulators, etc.). To determine materiality, topics are rated based on their potential impact to the business and importance to key external stakeholders. We also view issues through a double-materiality lens, which assesses the ESG factors likely to affect our business (e.g., cause financial impacts) as well as the factors that our activities may affect.

[Add row]

(2.5) Does your organization identify and classify potential water pollutants associated with its activities that could have a detrimental impact on water ecosystems or human health?

(2.5.1) Identification and classification of potential water pollutants

Select from:

☒ Yes, we identify and classify our potential water pollutants

(2.5.2) How potential water pollutants are identified and classified

Water pollutants are identified and classified through environmental impact assessments and environmental aspect assessments we make in alignment with our public EHS policy, ISO 14001, ISO 45001, OSHAs Voluntary Protection Program and various EHS risk assessment and compliance programs we have in place. We have an internal chemical SDS CAS number review process for chemicals used onsite where new chemicals are evaluated against relevant environmental regulatory lists such as EPA Total Toxic Organics (TTO) Effluent Guidelines and Consolidated List of Lists under EPCRA, CERCLA and CAA. For US sites that have onsite wastewater treatment systems or discharge to POTW, we evaluate if any chemicals are regulated under semiconductor industry specific pretreatment standards for metals such as cadmium, chromium, copper, lead nickel silver zinc, cyanide. We regularly review chemicals used to maintain compliance with industrial wastewater permits and where applicable implement stormwater management plans and SPCC spill protection and control, etc.

[Fixed row]

(2.5.1) Describe how your organization minimizes the adverse impacts of potential water pollutants on water ecosystems or human health associated with your activities.

Row 1

(2.5.1.1) Water pollutant category

Select from:

- ☒ Other synthetic organic compounds

(2.5.1.2) Description of water pollutant and potential impacts

Synthetic organic compounds that Applied uses and manages include solvents and VOCs such as toluene isopropyl alcohol and methanol. Synthetic organic compounds can persist in the environment and can have a disruptive effect on public health and ecosystem health Toluene is listed in the EPA Drinking Water Contaminant List and methanol is listed in the Consolidated List of Lists under EPCRA, CERCLA and CAA.

(2.5.1.3) Value chain stage

Select all that apply

- ☒ Direct operations

(2.5.1.4) Actions and procedures to minimize adverse impacts

Select all that apply

- ☒ Upgrading of process equipment/methods
- ☒ Beyond compliance with regulatory requirements
- ☒ Reduction or phase out of hazardous substances
- ☒ Requirement for suppliers to comply with regulatory requirements
- ☒ Industrial and chemical accidents prevention, preparedness, and response
- ☒ Discharge treatment using sector-specific processes to ensure compliance with regulatory requirements
- ☒ Assessment of critical infrastructure and storage condition (leakages, spillages, pipe erosion etc.) and their resilience

(2.5.1.5) Please explain

We evaluate the environmental aspects and impacts of water pollutants in alignment with ISO 14001 and various EHS risk assessment and compliance programs. Throughout our facilities we have various levels of protection from organizational to physical and chemical controls. We deploy a hierarchy of control, which prioritizes replacement and minimization of hazardous substances, then implementing engineering controls, then lastly implementing procedural and/or administrative controls

such as SWPPP, SPCC solvent management plans, NDPES permits, etc. We also use monitoring wells to determine groundwater quality. We have self-tested voluntary wells while others are tested by local regulators. In all sites with industrial wastewater treatment, we ensure discharges are in alignment with local permit requirements, including engineering controls, instrumentation and monitoring and sampling and reporting to regulatory agencies. We self-monitor and/or the POTW tests water quality and validates that we meet permit limits. All manufacturing locations have registered ISO 140012015 and ISO 450012018 certifications or are on track to receive certification. Applied is a member of the Responsible Business Alliance (RBA), and requires its vendors and suppliers to comply with RBA Code of Conduct, which includes environmental standards aligned with regulatory requirements.

Row 2

(2.5.1.1) Water pollutant category

Select from:

☒ Oil

(2.5.1.2) Description of water pollutant and potential impacts

Oils that Applied uses and manages include diesel, gasoline, hydraulic oil and other commonly used industrial oils. Oil pollution can damage ecosystems and contaminate water for drinking and other purposes. Stormwater management is particularly important for oils that exist on impervious surfaces and can reach local ecosystems in bad weather. Gasoline is listed in the EPA Superfund Chemicals List and IARC Group 2B possibly carcinogenic to humans list.

(2.5.1.3) Value chain stage

Select all that apply

☒ Direct operations

(2.5.1.4) Actions and procedures to minimize adverse impacts

Select all that apply

- ☒ Upgrading of process equipment/methods
- ☒ Beyond compliance with regulatory requirements
- ☒ Reduction or phase out of hazardous substances
- ☒ Requirement for suppliers to comply with regulatory requirements
- ☒ Industrial and chemical accidents prevention, preparedness, and response
- ☒ Discharge treatment using sector-specific processes to ensure compliance with regulatory requirements
- ☒ Assessment of critical infrastructure and storage condition (leakages, spillages, pipe erosion etc.) and their resilience

(2.5.1.5) Please explain

We evaluate the environmental aspects and impacts of water pollutants in alignment with ISO 14001 and various EHS risk assessment and compliance programs. Throughout our facilities we have various levels of protection from organizational to physical and chemical controls. We deploy a hierarchy of control, which prioritizes replacement and minimization of hazardous substances, then implementing engineering controls, then lastly implementing procedural and or administrative controls such as SWPPP, NDPES permits, etc. We also use monitoring wells to determine groundwater quality. To prevent oil related spills to the environments, we implement Spill Prevention, Control, and Countermeasure (SPCC) plans across relevant sites, along with secondary containment and infrastructure assessments. We have self-tested voluntary wells, while other wells are tested by local regulators. In all sites with industrial wastewater treatment, we ensure discharges are in alignment with local permit requirements, including engineering controls, instrumentation and monitoring and sampling and reporting to regulatory agencies. We self-monitor and/or the POTW tests water quality and validates that we meet permit limits. All manufacturing locations have registered ISO 140012015 and ISO 450012018 certifications or are on track to receive certification. Applied is a member of the RBA and requires its suppliers to comply with RBA Code of Conduct, which includes environmental regulatory requirements.

Row 3

(2.5.1.1) Water pollutant category

Select from:

☒ Inorganic pollutants

(2.5.1.2) Description of water pollutant and potential impacts

Inorganic pollutants that Applied uses and manages include heavy metals such as copper and acids, i.e., hydrofluoric acid, nitric acid, sulfuric acid and hydrochloric acid. Inorganic pollutants can be nonbiodegradable, persist in the environment and have a disruptive effect on public health and ecosystem health. Copper is listed in the EPA Drinking Water Contaminant List and hydrochloric acid is listed in the consolidated List of Lists under EPCRA, CERCLA, and CAA.

(2.5.1.3) Value chain stage

Select all that apply

☒ Direct operations

(2.5.1.4) Actions and procedures to minimize adverse impacts

Select all that apply

☒ Upgrading of process equipment/methods

☒ Beyond compliance with regulatory requirements

- ☑ Reduction or phase out of hazardous substances
- ☑ Requirement for suppliers to comply with regulatory requirements
- ☑ Industrial and chemical accidents prevention, preparedness, and response
- ☑ Discharge treatment using sector-specific processes to ensure compliance with regulatory requirements
- ☑ Assessment of critical infrastructure and storage condition (leakages, spillages, pipe erosion etc.) and their resilience

(2.5.1.5) Please explain

We evaluate the environmental aspects and impacts of water pollutants in alignment with ISO 14001 and various EHS risk assessment and compliance programs. Throughout our facilities we have various levels of protection, from organizational to physical and chemical controls. We deploy a hierarchy of controls, which prioritizes replacement and minimization of hazardous substances, then implementing engineering controls, then lastly implementing procedural and/or administrative controls such as SWPPP, SPCC Plans, NDPES permits, etc. We also use monitoring wells to determine groundwater quality. We have self-tested voluntary wells, while others are tested by local regulators. In all sites with industrial wastewater treatment, we ensure discharges are in alignment with local permit requirements including engineering controls, instrumentation and monitoring and sampling and reporting to regulatory agencies. We self-monitor and/or the POTW tests water quality and validates that we meet permit limits. All manufacturing locations have registered ISO 140012015 and ISO 450012018 certifications or are on track to receive certification. For inorganic pollutants in particular we have treatment systems or tank and haul systems for transport to a disposal facility for heavy metals and deploy pH neutralization for relevant acids. Applied is a member of the RBA and requires its suppliers to comply with RBA Code of Conduct, which includes environmental regulatory requirements.

[Add row]

C3. Disclosure of risks and opportunities

(3.1) Have you identified any environmental risks which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future?

Climate change

(3.1.1) Environmental risks identified

Select from:

☒ Yes, both in direct operations and upstream/downstream value chain

Water

(3.1.1) Environmental risks identified

Select from:

☒ No

(3.1.2) Primary reason why your organization does not consider itself to have environmental risks in your direct operations and/or upstream/downstream value chain

Select from:

☒ Environmental risks exist, but none with the potential to have a substantive effect on our organization

(3.1.3) Please explain

Although several of Applied Materials' sites are located in regions exposed to "High" or "Extremely high" baseline water-related risks such as water stress and water quality (namely manufacturing sites in Xi'an, China and Rehovot, Israel), due to the localized nature of these risks and Applied's relatively low water usage at these sites, no single location poses substantive risk to the business. Facilities teams have already been implementing projects to manage water usage at these sites such as smart irrigation systems and rainwater reclamation as well as installing water efficient fixtures. Additional water-saving projects are also being planned to further mitigate risks. From a value chain perspective, only a few select types of Applied tools require ultrapure water in production processes. Most of our tools only require cooling water, which runs in a closed-loop process and is negligible in terms of water consumption. Risks associated with Applied's value chain may exist in some

regions in the manufacturing of select semiconductor products, and any potential limitations, restrictions, or costs associated with this activity; however, there is currently no mechanism in place to accurately and quantitatively assess specific water-related risks at a water-basin level associated with our customers, especially taking into consideration the extensive risk mitigation measures many of them are taking based on their water use levels.

Plastics

(3.1.1) Environmental risks identified

Select from:

☒ No

(3.1.2) Primary reason why your organization does not consider itself to have environmental risks in your direct operations and/or upstream/downstream value chain

Select from:

☒ Environmental risks exist, but none with the potential to have a substantive effect on our organization

(3.1.3) Please explain

Although Applied Materials uses plastic in the production and packaging of its products, the overall volumes required are unlikely to pose substantive risks to the business, and actions are already being taken to address plastics use in our product packaging. In FY24, about 80% of our packaging materials were made from recyclable materials (polyethylene, polypropylene, corrugated fiberboard, steel and wood. Our supplier packaging specifications prohibit all non-recyclable material, except laminated plastic bags used for moisture barrier protection, for which there is currently no viable alternative.

[Fixed row]

(3.1.1) Provide details of the environmental risks identified which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future.

(3.1.1.9) Organization-specific description of risk

The implementation of carbon-pricing mechanisms (e.g., carbon tax) in locations where Applied Materials operates could increase the company's operating costs over the short-, medium- and long-term. In FY24 Applied refined its analysis to assess country/location-specific estimates of potential carbon pricing impacts based on the Scope 1 and 2 emissions by country and projected carbon prices based on the NGFS data explorer for the REMIND-MagPIE integrated assessment model, which compared "Stated Policies" (lower carbon price) and "Net Zero 2050" (high carbon price) scenarios. The impact of carbon pricing mechanisms will depend on the locations where such schemes are adopted, the price per ton of carbon set in that market, the thresholds at which the carbon price/tax is applied, when the pricing mechanism is adopted, as well as Applied's capability to reduce its Scope 1 and 2 emissions in alignment with a Net Zero trajectory (the lower the company's

emissions footprint, the lower the impact of carbon pricing impacts). Applied's progress towards meeting its science-based targets and aligning with its Net Zero 2040 Playbook mitigates this risk.

(3.1.1.11) Primary financial effect of the risk

Select from:

☒ Increased indirect [operating] costs

(3.1.1.12) Time horizon over which the risk is anticipated to have a substantive effect on the organization

Select all that apply

☒ Medium-term

(3.1.1.13) Likelihood of the risk having an effect within the anticipated time horizon

Select from:

☒ About as likely as not

(3.1.1.14) Magnitude

Select from:

☒ Medium-low

(3.1.1.16) Anticipated effect of the risk on the financial position, financial performance and cash flows of the organization in the selected future time horizons

Annual operating costs could increase over the medium-term (6-10 years) if Applied becomes subject to mandatory carbon pricing schemes such as a carbon tax while the company is still working to reduce its emissions. The overall operating expense impact will depend on the price per ton of CO2 the company would be subject to and the total GHG emissions that are subject to the pricing scheme. Based on Applied's current projections of emissions growth, Applied estimates the maximum potential impact at \$50M under a "Net Zero 2050" scenario if maximum carbon pricing schemes are enacted across all the countries where Applied operates, however this potential cost is expected to be reduced substantially as the company progresses towards its 100% renewable electricity and science-based targets.

(3.1.1.17) Are you able to quantify the financial effect of the risk?

Select from:

☒ Yes

(3.1.1.21) Anticipated financial effect figure in the medium-term – minimum (currency)

2000000

(3.1.1.22) Anticipated financial effect figure in the medium-term – maximum (currency)

50000000

(3.1.1.25) Explanation of financial effect figure

The figures are estimates based on the country-specific forecasted cost of carbon over the medium-term based on data from the Network for Greening the Financial System (NGFS) data explorer for the REMIND-MagPIE integrated assessment model. NGFS carbon prices were adjusted for inflation and are based on 2025 USD. The forecasted prices were multiplied against Applied's projected location-specific Scope 1 and 2 greenhouse gas emissions between present day and 2040 across the low carbon ("Net Zero 2050") and high carbon ("Stated Policies") scenarios. The maximum financial figure reflects the highest projected carbon prices (Net Zero 2050 scenario) being enacted across all countries in which Applied operates, with peak OPEX impacts projected between 2030-2035 in this scenario.

(3.1.1.26) Primary response to risk

Compliance, monitoring and targets

☒ Implementation of environmental best practices in direct operations

(3.1.1.27) Cost of response to risk

10500000

(3.1.1.28) Explanation of cost calculation

The cost is based on an estimate of the total FY24 capital investment for projects that support decarbonization efforts across Applied's global facilities and operations. The Applied global facilities team tracks all capital projects through a structured capital allocation review process. Projects associated with key potential decarbonization levers, such lighting retrofits, HVAC improvements, or equipment upgrades are identified in the project tracker and the associated capital spend is included in the cost estimation provided.

(3.1.1.29) Description of response

Decarbonization investments in FY24 included new onsite solar installations, lighting retrofits, HVAC improvements, and Building Management System (BMS) upgrades, which are all contributing to lowering the company's Scope 1 and 2 emissions, thus reducing the potential costs associated with any future carbon pricing mechanisms. Applied has science-based targets to achieve 100% renewable electricity and 50% absolute reduction of Scopes 1 and 2 emissions by 2030, which if achieved, should reduce any impacts associated with carbon pricing schemes associated with its operations.

Climate change

(3.1.1.1) Risk identifier

Select from:

☒ Risk2

(3.1.1.3) Risk types and primary environmental risk driver

Market

☒ Changing customer behavior

(3.1.1.4) Value chain stage where the risk occurs

Select from:

☒ Downstream value chain

(3.1.1.6) Country/area where the risk occurs

Select all that apply

☒ China

☒ India

☒ Italy

☒ Japan

☒ Canada

☒ Finland

☒ Germany

☒ Ireland

☒ France

☒ Greece

☒ Israel

☒ Austria

☒ Belgium

☒ Netherlands

☒ Philippines

☒ Taiwan, China

- ☒ Malaysia
- ☒ Singapore
- ☒ United Kingdom of Great Britain and Northern Ireland

- ☒ Republic of Korea
- ☒ United States of America

(3.1.1.9) Organization-specific description of risk

Applied Materials' customers' chip manufacturing operations are typically both energy and water intensive, and customers are increasingly focusing on improving the efficiency and overall resource consumption of their manufacturing processes and setting ambitious goals to lower their impacts. Over time, customers may also be subject to both cost and regulatory pressures that incentivize them to shift their purchasing preferences towards increasingly more energy and water-efficient equipment. There is a risk of impacts to revenues and market share if Applied is unable to outpace its competitors in offering more efficient equipment that enables customers to meet their business and environmental objectives.

(3.1.1.11) Primary financial effect of the risk

Select from:

- ☒ Decreased revenues due to reduced demand for products and services

(3.1.1.12) Time horizon over which the risk is anticipated to have a substantive effect on the organization

Select all that apply

- ☒ Medium-term

(3.1.1.13) Likelihood of the risk having an effect within the anticipated time horizon

Select from:

- ☒ Unlikely

(3.1.1.14) Magnitude

Select from:

- ☒ Medium

(3.1.1.16) Anticipated effect of the risk on the financial position, financial performance and cash flows of the organization in the selected future time horizons

Isolating a financial figure related to shifting customer preferences specific to sustainability is extremely difficult due to the number of variables involved, such as determining how many and which customers are likely to shift their purchasing behaviors and how quickly, how the environmental performance of products would be weighted compared to other product criteria, the existence of viable competitive products in the market, and Applied's capabilities to meet customer demand. The resulting analysis would yield too many scenarios and wide-ranging results with a high degree of uncertainty, rendering the analysis not practical or useful.

(3.1.1.17) Are you able to quantify the financial effect of the risk?

Select from:

☒ No

(3.1.1.26) Primary response to risk

Engagement

☒ Engage with customers

(3.1.1.27) Cost of response to risk

0

(3.1.1.28) Explanation of cost calculation

Applied's existing R&D and 3x30 team budgets already encompass the funds to continuously assess and implement efficiency measures in our equipment), thus no added costs are required to manage this risk at this time.

(3.1.1.29) Description of response

Applied Materials addresses this risk through the implementation of its 3x30 goals, aimed at achieving a 30% reduction in energy and chemical impact for its semiconductor products on a per-wafer basis by 2030, and its EcoUp product suite. Applied established its 3x30 goals and a team of experts, including a Sustainability Center of Excellence, who are supporting this initiative to ensure the company continues to enhance its offering of products that reduce energy and emissions impacts. The company's EcoUp products are especially qualified components or subsystems that improve the operating efficiency of its new and existing products. Applied released Vistara, Applied's first purpose-built platform that combines and co-optimizes multiple process steps within a single tool, resulting in an estimated 35% reduction in platform energy consumption and about 30% reduction in chemical footprint for etch applications. In addition, Applied Materials is developing solutions such as the iSystem controller and EcoTwin software, which enable our customers to comprehensively measure and manage the power usage of our process tools and optimize the energy use of their fabs; and the Aeris™-G abatement system, which can significantly reduce GHG emissions from certain process tools as compared to conventional abatement solutions. Applied's teams actively engage customers to bring awareness to existing sustainability solutions that we offer as well as to identify collaborative opportunities to reduce our collective footprints.

[Add row]

(3.1.2) Provide the amount and proportion of your financial metrics from the reporting year that are vulnerable to the substantive effects of environmental risks.

Climate change

(3.1.2.1) Financial metric

Select from:

☒ OPEX

(3.1.2.3) % of total financial metric vulnerable to transition risks for this environmental issue

Select from:

☒ Less than 1%

(3.1.2.5) % of total financial metric vulnerable to physical risks for this environmental issue

Select from:

☒ Less than 1%

(3.1.2.7) Explanation of financial figures

This range reported is based on the estimated financial impact of the carbon pricing risk (transition risk) reported in 3.1.1 as a proportion of total Applied operating expenses forecasted in the next 6-10 years. Physical risks assessed for specific sites/geographies and individual climate hazards in the climate risk scenario analysis did not meet the thresholds to be considered substantive risks at this point in time.

[Add row]

(3.3) In the reporting year, was your organization subject to any fines, enforcement orders, and/or other penalties for water-related regulatory violations?

	Water-related regulatory violations	Comment
	Select from: <input checked="" type="checkbox"/> No	Applied was not subject to any water-related fines, enforcement orders, and/or other penalties

[Fixed row]

(3.5) Are any of your operations or activities regulated by a carbon pricing system (i.e. ETS, Cap & Trade or Carbon Tax)?

Select from:

☒ No, but we anticipate being regulated in the next three years

(3.5.4) What is your strategy for complying with the systems you are regulated by or anticipate being regulated by?

Applied Materials is subject to the EU Carbon Border Adjustment Mechanism (CBAM) for a small subset of its products that are shipped into the EU, with the carbon tax expected to be initiated in Q1 2026 or 2027 (timing to be confirmed by forthcoming EU Omnibus legislation). In preparation, the company has established a cross-functional internal task force representing stakeholders from global trade, legal, supply chain, operations, Sustainability, and other related business teams to coordinate the company's response to CBAM. Applied intends to leverage existing software to collect CBAM specific supplier energy and greenhouse gas emissions data based on the CBAM data template. to meet CBAM reporting requirements.

(3.6) Have you identified any environmental opportunities which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future?

Climate change

(3.6.1) Environmental opportunities identified

Select from:

☒ Yes, we have identified opportunities, and some/all are being realized

Water

(3.6.1) Environmental opportunities identified

Select from:

☒ No

(3.6.2) Primary reason why your organization does not consider itself to have environmental opportunities

Select from:

☒ Opportunities exist, but none anticipated to have a substantive effect on organization

(3.6.3) Please explain

While water conservation opportunities exist, due to the localized nature of water consumption and Applied's relatively low water usage across our sites, the expected operational savings from these projects are not substantial enough to be characterized as having a substantive effect on our business. This does not stop the company from investing in projects that drive water efficiency across our operations. In FY24 several sites implemented projects driving water conservation, including channeling HVAC condensate to top off cooling towers, implementing RO/DI water recycling/reuse systems, and implementing rainwater collection systems for irrigation.

[Fixed row]

(3.6.1.8) Organization specific description

Applied Materials offers equipment and service features that enable our customers to save energy and reduce emissions, such as the iSystem controller, which provides automated tracking of power usage across fab systems, EcoTwin software, which enables fab operators to optimize the performance of Applied tools, and AerisTM-G, which is designed to abate GHG emissions more effectively than traditional abatement solutions. As our key customers set and begin driving towards their ambitious emission reduction goals (such as scope 1 and 2 emissions reductions or Net Zero goals), demand and preference for energy and emission-reducing solutions will continue to grow. Applied Materials is expanding our offering of such solutions, whether through more efficient components and processes, our tool monitoring systems, and tailored solutions including our Eco Services offerings.

(3.6.1.9) Primary financial effect of the opportunity

Select from:

- ☒ Increased revenues resulting from increased demand for products and services

(3.6.1.10) Time horizon over which the opportunity is anticipated to have a substantive effect on the organization

Select all that apply

☒ Short-term

(3.6.1.11) Likelihood of the opportunity having an effect within the anticipated time horizon

Select from:

☒ About as likely as not (33–66%)

(3.6.1.12) Magnitude

Select from:

☒ Low

(3.6.1.14) Anticipated effect of the opportunity on the financial position, financial performance and cash flows of the organization in the selected future time horizons

The opportunity could increase revenues by expanding the sales of existing eco-efficient products and services to a wider set of customers and fab locations within the next 3-5 years. The benefits are likely to continue to persist further into the future, however the uncertainty of the projections increases substantially due to the complexity of the variables that could impact outcomes (e.g., whether customers stay on track to meeting their goals, potential regulations they may be subject to, advancements in technology).

(3.6.1.15) Are you able to quantify the financial effects of the opportunity?

Select from:

☒ Yes

(3.6.1.17) Anticipated financial effect figure in the short-term - minimum (currency)

140000000

(3.6.1.18) Anticipated financial effect figure in the short-term – maximum (currency)

260000000

(3.6.1.23) Explanation of financial effect figures

The range provided is an estimation of the total aggregate revenue potential of feasible increased sales across Applied's 24 eco-focused products and services in our portfolio today that is based on projected customer demand over the near-term.

(3.6.1.24) Cost to realize opportunity

0

(3.6.1.25) Explanation of cost calculation

Applied's existing R&D and 3x30 team budgets already include the funds needed to continuously assess and implement efficiency measures to our equipment. Thus, no added costs are required to manage this risk at this time.

(3.6.1.26) Strategy to realize opportunity

Applied Materials addresses this opportunity through the implementation of its 3x30 goals, aimed at achieving a 30% reduction in energy and chemical impact for its semiconductor products on a per-wafer basis by 2030 and our EcoUp product suite. Applied established its 3x30 goals and a team of experts, including the Sustainability Center of Excellence, who are supporting this initiative to ensure the company continues to enhance its offering of products that reduce energy and emissions impacts. The company's EcoUp products are especially qualified components or subsystems that improve the operating efficiency of its new and existing products. Applied released Vistara, Applied's first purpose-built platform that combines and co-optimizes multiple process steps within a single tool, resulting in an estimated 35% reduction in platform energy consumption and about 30% reduction in chemical footprint for etch applications. In addition, Applied Materials is developing solutions such as the iSystem controller and EcoTwin software, which enable our customers to comprehensively measure and manage the power usage of our process tools and optimize the energy use of their fabs; and the Aeris™-G abatement system which can significantly reduce GHG emissions from certain process tools as compared to conventional abatement solutions. Applied's teams actively engage customers to bring awareness to existing sustainability solutions that we offer as well as to identify collaborative opportunities to reduce our collective footprints.

☒ Monitoring progress towards corporate targets

☒ Monitoring the implementation of a climate transition plan

- ☒ Approving corporate policies and/or commitments
- ☒ Approving and/or overseeing employee incentives
- ☒ Monitoring the implementation of the business strategy
- ☒ Overseeing reporting, audit, and verification processes

(4.1.2.7) Please explain

Responsibilities: Applied Materials' Corporate Governance and Nominating Committee (CGNC) oversees the company's sustainability and climate-related strategy to foster accountability. On a quarterly basis, the CGNC is briefed by the Senior Director of ESG on the status of Applied's company-wide sustainability strategy, which is focused on integrating sustainability into our operations and company culture through initiatives aligned to business strategy that address a broad set of stakeholders, including customers, employees, suppliers, governments and our local communities. The CGNC reviews the company's climate and energy goals and initiatives and progress made towards meeting them, including the company's emissions, renewable electricity procurement, and product efficiency, as well as climate-related reporting and disclosures (namely our annual Impact Report). Example of climate-related actions: In FY24 the CGNC reviewed and provided input on the progress made towards Applied's 2030 science-based targets and the revised forecast for our 2040 Net Zero Playbook.

Policies, commitments, and targets

- ☒ Monitoring compliance with corporate environmental policies and/or commitments
- ☒ Measuring progress towards environmental corporate targets
- ☒ Measuring progress towards environmental science-based targets

Strategy and financial planning

- ☒ Developing a business strategy which considers environmental issues
- ☒ Implementing a climate transition plan
- ☒ Implementing the business strategy related to environmental issues
- ☒ Managing annual budgets related to environmental issues
- ☒ Managing priorities related to innovation/low-environmental impact products or services (including R&D)

(4.3.1.4) Reporting line

Select from:

- ☒ Reports to the board directly

(4.3.1.5) Frequency of reporting to the board on environmental issues

Select from:

- ☒ Quarterly

(4.3.1.6) Please explain

Applied Materials' CEO holds overall responsibility for climate-related issues. The CEO and his executive team, which represent different functions of the business, review, assess, and provide input on the company's climate strategy through the annual strategic review process, which establishes the strategy and annual milestones to drive progress towards the company's climate commitments. Progress on the strategy and milestones is monitored throughout the year during quarterly business reviews, which are attended by the CEO and his executive team. Accountability towards our corporate 2030 climate goals, which cover Applied Materials' science-based targets, 100% renewable electricity, and product efficiency goals, as well as our Net Zero Playbook, is also monitored and reported on via our Corporate Scorecard, which is tied to annual executive compensation. Discussion of ongoing and emerging climate and energy dependencies, impacts, risks, and opportunities are presented for discussion and input to the CEO and the Corporate Governance and Nominating Committee of the Board of Directors on a quarterly basis as well.

Water

(4.3.1.1) Position of individual or committee with responsibility

Executive level

- ☒ Other C-Suite Officer, please specify :Chief of Staff, Corporate Strategy and Development

(4.3.1.2) Environmental responsibilities of this position

Dependencies, impacts, risks and opportunities

- ☒ Assessing environmental dependencies, impacts, risks, and opportunities
☒ Assessing future trends in environmental dependencies, impacts, risks, and opportunities

Policies, commitments, and targets

- ☒ Monitoring compliance with corporate environmental policies and/or commitments

Strategy and financial planning

- ☒ Developing a business strategy which considers environmental issues
☒ Implementing the business strategy related to environmental issues
☒ Managing annual budgets related to environmental issues
☒ Managing environmental reporting, audit, and verification processes
☒ Managing major capital and/or operational expenditures relating to environmental issues

(4.3.1.4) Reporting line

Select from:

- ☒ Reports to the Chief Executive Officer (CEO)

(4.3.1.5) Frequency of reporting to the board on environmental issues

Select from:

- ☒ Quarterly

(4.3.1.6) Please explain

Applied's GVP, Chief of Staff, Corporate Strategy and Development, who reports into the CEO, oversees and is responsible for the various teams that manage water-related dependencies, impacts, risks and opportunities, including our global Facilities, EHS, Sustainability, and BCP teams. Responsibilities include the assessment and monitoring of water-related risks and opportunities, management and tracking of water resources and consumption across Applied's facilities and complying with any water-related regulations or policies. Insights, actions, and progress relating to water-related issues are shared when relevant during the company's structured quarterly business review cycles, or in other relevant forums, such as executive reviews of large infrastructure projects. These meetings are attended by all the teams reporting into the Corporate Strategy and Development group so any pertinent water-related issues raised can be socialized across internal business functions and any related dependencies, impacts, risks, or opportunities can be identified and actioned on as necessary.

Biodiversity

(4.3.1.1) Position of individual or committee with responsibility

Other

☒ Other, please specify :Senior Director, ESG

(4.3.1.2) Environmental responsibilities of this position

Dependencies, impacts, risks and opportunities

☒ Assessing environmental dependencies, impacts, risks, and opportunities

☒ Assessing future trends in environmental dependencies, impacts, risks, and opportunities

Policies, commitments, and targets

☒ Setting corporate environmental policies and/or commitments

Strategy and financial planning

☒ Developing a business strategy which considers environmental issues

☒ Implementing the business strategy related to environmental issues

☒ Managing environmental reporting, audit, and verification processes

(4.3.1.4) Reporting line

Select from:

☒ Other, please specify :Chief of Staff, Corporate Strategy and Development

(4.3.1.5) Frequency of reporting to the board on environmental issues

Select from:

☒ Quarterly

(4.3.1.6) Please explain

Applied's Senior Director of ESG has oversight of biodiversity-related issues. Based on a comprehensive ESG double materiality assessment process, biodiversity is not considered a material risk or impact area for Applied's business due to its limited reliance on and exposure to resources or locations that are sensitive to this issue. Still, Applied recognizes that we cannot collectively reach our net zero aspirations without the protection and restoration of nature. Although Applied has minimal exposure to biodiversity impacts through its business operations, we are actively evaluating opportunities to invest in nature-based restoration projects on an on-going basis, which would benefit biodiversity, climate and communities. Such opportunities are discussed and vetted with other key stakeholders such as Finance, Legal, and Procurement teams as opportunities arise.

[Add row]

(4.5) Do you provide monetary incentives for the management of environmental issues, including the attainment of targets?

Climate change

(4.5.1) Provision of monetary incentives related to this environmental issue

Select from:

☒ Yes

(4.5.2) % of total C-suite and board-level monetary incentives linked to the management of this environmental issue

2.5

(4.5.3) Please explain

The percentage is associated with the weighting of climate-related issues in relation to all other issues assessed on the corporate scorecard, which informs the annual executive team incentive bonus.

Water

(4.5.1) Provision of monetary incentives related to this environmental issue

Select from:

☒ No, and we do not plan to introduce them in the next two years

(4.5.3) Please explain

Because Applied Materials' operations are not water-intensive nor pose substantive risks/opportunities for the company, management of water-related issues has not been prioritized in the corporate scorecard, which informs the annual executive team incentive bonus. However, the C-suite does have compensation-based incentives for other critical sustainability issues.

[Fixed row]

(4.5.1) Provide further details on the monetary incentives provided for the management of environmental issues (do not include the names of individuals).

Climate change

(4.5.1.1) Position entitled to monetary incentive

Board or executive level

☒ Corporate executive team

(4.5.1.2) Incentives

Select all that apply

☒ Bonus - % of salary

(4.5.1.3) Performance metrics

Targets

☒ Progress towards environmental targets

☒ Achievement of environmental targets

- ☒ Reduction in absolute emissions in line with net-zero target

Strategy and financial planning

- ☒ Achievement of climate transition plan

Emission reduction

- ☒ Reduction in emissions intensity
- ☒ Increased share of renewable energy in total energy consumption
- ☒ Reduction in absolute emissions

(4.5.1.4) Incentive plan the incentives are linked to

Select from:

- ☒ Short-Term Incentive Plan, or equivalent, only (e.g. contractual annual bonus)

(4.5.1.5) Further details of incentives

Objectives to incentivize progress towards Applied Materials' climate goals are tracked and incorporated into the Corporate Scorecard, which is used to inform the annual incentive bonus. Objectives to measure progress towards the following goals are included in the scorecard: - 50% reduction of scope 1 and 2 emissions by 2030 (SBTi approved) -100% renewable electricity in the U.S. by 2022, and globally by 2030 (SBTi approved) - 55% intensity reduction of Scope 3 product use emissions per \$M value added (SBTi approved) - 30% reduction in energy and chemical consumption per wafer for semiconductor products by 2030 - Progress towards Applied 2040 Net Zero Playbook

(4.5.1.6) How the position's incentives contribute to the achievement of your environmental commitments and/or climate transition plan

The incentive directly ties to ensuring progress on our climate commitments across our science-based Scope 1, 2, and 3 GHG emissions reduction targets and holds the company accountable to making progress towards its 2040 Net Zero Playbook, which serves as the company's climate transition plan. Annual measurable milestones are set to ensure progress toward each climate goal and reviewed on a quarterly basis. The level of achievement of the milestones assessed at the end of the fiscal year informs the annual incentive bonus for the Sustainability/Net Zero component of the scorecard.

[Add row]

(4.6) Does your organization have an environmental policy that addresses environmental issues?

	Does your organization have any environmental policies?
	Select from: <input checked="" type="checkbox"/> Yes

[Fixed row]

(4.6.1) Provide details of your environmental policies.

Row 1

(4.6.1.1) Environmental issues covered

Select all that apply

- ☒ Climate change
- ☒ Water

(4.6.1.2) Level of coverage

Select from:

- ☒ Organization-wide

(4.6.1.3) Value chain stages covered

Select all that apply

- ☒ Direct operations
- ☒ Upstream value chain
- ☒ Downstream value chain

(4.6.1.4) Explain the coverage

Applied's Standards of Business Conduct (both for our company and for business partners) as well as Applied' EHS policy cover the protection of the environment as our corporate responsibility with the aim of meeting and exceeding environmental regulations to minimize our impact on the environment, which includes impacts on climate and water. Further, Applied Materials is a member of the Responsible Business Alliance (RBA), committed to conforming to the RBA code of conduct, and requires suppliers also to conform to the code of conduct, which includes expectations around water management (both usage and discharge) and minimizing energy consumption and GHG emissions.

(4.6.1.5) Environmental policy content

Environmental commitments

- ☒ Commitment to comply with regulations and mandatory standards
- ☒ Commitment to take environmental action beyond regulatory compliance
- ☒ Commitment to stakeholder engagement and capacity building on environmental issues

Climate-specific commitments

- ☒ Commitment to 100% renewable energy

Water-specific commitments

- ☒ Commitment to control/reduce/eliminate water pollution
- ☒ Commitment to reduce water consumption volumes
- ☒ Commitment to reduce water withdrawal volumes
- ☒ Commitment to safely managed WASH in local communities

(4.6.1.6) Indicate whether your environmental policy is in line with global environmental treaties or policy goals

Select all that apply

- ☒ Yes, in line with the Paris Agreement

(4.6.1.7) Public availability

Select from:

- ☒ Publicly available

(4.6.1.8) Attach the policy

(4.10) Are you a signatory or member of any environmental collaborative frameworks or initiatives?

(4.10.1) Are you a signatory or member of any environmental collaborative frameworks or initiatives?

Select from:

☒ Yes

(4.10.2) Collaborative framework or initiative

Select all that apply

- ☒ RE100
- ☒ Science-Based Targets Initiative (SBTi)
- ☒ The Climate Pledge
- ☒ Other, please specify :Responsible Business Alliance (RBA); SEMI Climate Consortium

(4.10.3) Describe your organization's role within each framework or initiative

- RE100: Applied is a public signatory, committing to reaching 100% renewable electricity by 2030 - SBTi: Applied has validated its near-term Scope 1, 2, and 3 emission reduction targets with SBTi - The Climate Pledge: Applied signed on as a signatory to the Climate Pledge and plans to engage with fellow signatories on collective opportunities to identify and scale solutions that support our Net Zero ambitions - Responsible Business Alliance (RBA): Applied has been a member of the RBA, the world's largest industry coalition dedicated to responsible business conduct in global supply chains, since 2008, adopting the RBA code of conduct and conducting RBA audits of key suppliers. Applied actively engages in various RBA working groups. - SEMI Climate Consortium (SCC): Applied is a Founding Member of the SCC, which is working to advance climate efforts across the semiconductor value chain. Applied serves on the Governing Council and leads and actively participates in the various SCC working groups.

[Fixed row]

(4.11) In the reporting year, did your organization engage in activities that could directly or indirectly influence policy, law, or regulation that may (positively or negatively) impact the environment?

(4.11.1) External engagement activities that could directly or indirectly influence policy, law, or regulation that may impact the environment

Select all that apply

☒ Yes, we engaged indirectly through, and/or provided financial or in-kind support to a trade association or other intermediary organization or individual whose activities could influence policy, law, or regulation

(4.11.2) Indicate whether your organization has a public commitment or position statement to conduct your engagement activities in line with global environmental treaties or policy goals

Select from:

☒ Yes, we have a public commitment or position statement in line with global environmental treaties or policy goals

(4.11.3) Global environmental treaties or policy goals in line with public commitment or position statement

Select all that apply

☒ Paris Agreement

(4.11.4) Attach commitment or position statement

FY24-NetZero-CEO-Statement.pdf

(4.11.5) Indicate whether your organization is registered on a transparency register

Select from:

☒ Yes

(4.11.6) Types of transparency register your organization is registered on

Select all that apply

☒ Mandatory government register

☒ Voluntary government register

(4.11.7) Disclose the transparency registers on which your organization is registered & the relevant ID numbers for your organization

Applied's corporate PAC is registered with the Federal Election Commission (mandatory). All Applied U.S. Government Affairs personnel are also registered with the House and Senate Clerks per the Lobbying Disclosures Act, as well as with California and Massachusetts bodies. Applied is also registered with the EU Transparency Register (ID 583393138546-76) voluntarily. (4.11.8) Describe the process your organization

(4.11.8) Describe the process your organization has in place to ensure that your external engagement activities are consistent with your environmental commitments and/or transition plan

The Sustainability team works closely with Applied Materials' Government Affairs team to ensure awareness of Applied Materials' sustainability -related priorities and objectives (including climate-related issues) and alignment in any engagement efforts. The Government Affairs team actively flags key updates, rulemaking and opportunities that may pertain to Applied Materials' climate interests – for example, in FY24 we frequently engaged with our EU Government Affairs team to understand and track the EU Omnibus packages and their impacts on the EU Corporate Sustainability Reporting Directive and the Corporate Sustainability Due Diligence Directive. More recently, we reached out to our US Government Affairs team and highlighted the importance of the clean energy tax credits to Applied's renewable energy targets and the impact to the energy prices we could face in the future so that these priorities could be communicated to government stakeholders and legislators. Applied Materials' Net Zero 2040 Playbook serves as our position statement to conduct engagement activities in line with this ambition.
[Fixed row]

(4.11.2) Provide details of your indirect engagement on policy, law, or regulation that may (positively or negatively) impact the environment through trade associations or other intermediary organizations or individuals in the reporting year.

Row 1

(4.11.2.1) Type of indirect engagement

Select from:

☒ Indirect engagement via other intermediary organization or individual

(4.11.2.2) Type of organization or individual

Select from:

☒ Non-Governmental Organization (NGO) or charitable organization

(4.11.2.3) State the organization or position of individual

Clean Energy Buyers Association (CEBA)

(4.11.2.5) Environmental issues relevant to the policies, laws, or regulations on which the organization or individual has taken a position

Select all that apply

☒ Climate change

(4.11.2.6) Indicate whether your organization's position is consistent with the organization or individual you engage with

Select from:

☒ Consistent

(4.11.2.7) Indicate whether your organization attempted to influence the organization or individual's position in the reporting year

Select from:

☒ Yes, we publicly promoted their current position

(4.11.2.8) Describe how your organization's position is consistent with or differs from the organization or individual's position, and any actions taken to influence their position

CEBA's goal of achieving wide-scale carbon-free energy across the United States is squarely aligned with Applied's climate and renewable electricity goals.

(4.11.2.9) Funding figure your organization provided to this organization or individual in the reporting year (currency)

5000

(4.11.2.10) Describe the aim of this funding and how it could influence policy, law or regulation that may impact the environment

CEBA actively identifies advocacy opportunities with regulators and legislators to advance the expansion of clean energy access across the country, which Applied supports through our membership and by occasionally adding its name as a signatory in relevant statements/letters that may help drive these objectives forward. For example, we used CEBA’s analysis and advocacy materials to relay the importance of the clean energy tax credits through our Government Affairs team.

(4.11.2.11) Indicate if you have evaluated whether your organization’s engagement is aligned with global environmental treaties or policy goals

Select from:
☒ Yes, we have evaluated, and it is aligned

(4.11.2.12) Global environmental treaties or policy goals aligned with your organization’s engagement on policy, law or regulation

Select all that apply
☒ Paris Agreement
[Add row]

(4.12) Have you published information about your organization’s response to environmental issues for this reporting year in places other than your CDP response?

Select from:
☒ Yes

(4.12.1) Provide details on the information published about your organization’s response to environmental issues for this reporting year in places other than your CDP response. Please attach the publication.

Row 1

(4.12.1.1) Publication

Select from:
☒ In mainstream reports

(4.12.1.3) Environmental issues covered in publication

Select all that apply

- ☒ 2025
- ☒ 2030
- ☒ 2040
- ☒ 2050

(5.1.1.9) Driving forces in scenario

Local ecosystem asset interactions, dependencies and impacts

- ☒ Climate change (one of five drivers of nature change)

(5.1.1.10) Assumptions, uncertainties and constraints in scenario

The scenario was used as the low carbon pathway to assess exposure to 9 physical climate hazards across Applied's owned or operated facility locations which collectively comprise over 80% of property values and operational footprint. Hazards assessed include storm, precipitation, hail, wind speed, flooding (including fluvial, pluvial and coastal), extreme heat, wildfires, extreme cold and drought. Potential financial impacts for flooding, extreme wind events and extreme heat were calculated based on site-level inputs and industry average financial damage values.

(5.1.1.11) Rationale for choice of scenario

Two future pathways were considered for the climate scenario analysis, in alignment with TCFD recommendations. Physical risk scenarios used IPCC-aligned CMIP6 SSP-RCP models: • Low Carbon Pathway: Assumes environmental regulation and collective action will limit the greatest physical impacts of climate change by keeping global temperature increase below 2 degrees Celsius. • High Carbon Pathway: Assumes low collective action against climate change and a greater degree of global warming. The two pathways define a low-to-high envelope of potential risks and impacts so Applied can evaluate the range of possible outcomes and plan accordingly.

☒ 2040

☒ 2050

(5.1.1.9) Driving forces in scenario

Local ecosystem asset interactions, dependencies and impacts

☒ Climate change (one of five drivers of nature change)

(5.1.1.10) Assumptions, uncertainties and constraints in scenario

The analysis was updated using the WRI Aqueduct 4.0 water risk framework to project future water stress under three scenarios (SSP2-RCP4.5, SSP2-RCP8.5, and SSP3-RCP8.5) across Applied's owned or operated facility locations, which collectively comprise over 80% of property values and operational footprint. This quantitative approach was supplemented by qualitative analysis of three other elements of water risk: power supply (risk of decreased thermoelectric power in certain regions), water quality degradation, and water-related conflict.

(5.1.1.11) Rationale for choice of scenario

Two future pathways were considered for the climate scenario analysis, in alignment with TCFD recommendations. Physical risk scenarios used IPCC-aligned CMIP6 SSP-RCP models: • Low Carbon Pathway: Assumes environmental regulation and collective action will limit the greatest physical impacts of climate change by keeping global temperature increase below 2 degrees Celsius. • High Carbon Pathway: Assumes low collective action against climate change and a greater degree of global warming. The two pathways define a low-to-high envelope of potential risks and impacts so Applied can evaluate the range of possible outcomes and plan accordingly.

(5.1.1.9) Driving forces in scenario

Local ecosystem asset interactions, dependencies and impacts

- ☒ Climate change (one of five drivers of nature change)

(5.1.1.10) Assumptions, uncertainties and constraints in scenario

The IEA scenarios were particularly applied to transition risks relating to market and technology-related risks and opportunities, comparing Applied's year-over-year reductions in scope 3 emissions vs. year-over-year emissions reductions under an IEA NZE2050, as well as forecasted growth in key end-use market shifts for technologies that rely on Applied's products (e.g., solar, wind, battery).

(5.1.1.11) Rationale for choice of scenario

Two future pathways were considered for the climate scenario analysis, in alignment with TCFD recommendations. The IEA models were used for assessing transition risks related to market and technology risks to understand potential trends in either scenario. • Low Carbon Pathway: Assumes environmental regulation and collective action will limit the greatest physical impacts of climate change by keeping global temperature increase below 2 degrees Celsius. • High Carbon Pathway: Assumes low collective action against climate change and a greater degree of global warming. The two pathways define a low-to-high envelope of potential risks and impacts so Applied can evaluate the range of possible outcomes and plan accordingly.

Local ecosystem asset interactions, dependencies and impacts

☒ Climate change (one of five drivers of nature change)

Regulators, legal and policy regimes

☒ Global regulation

(5.1.1.10) Assumptions, uncertainties and constraints in scenario

Risks correlated to fluctuations in carbon pricing mechanisms, or those influenced by carbon pricing (proxy for trends in regulatory burden) leveraged climate scenarios from NGFS. • The Net Zero 2050 NGFS scenario was used to model a low-carbon pathway, while the Current Policies NGFS scenario was used to model a high-carbon pathway. • The REMIND-MAGPIE model was used to determine future carbon prices (US\$2024 per tCO₂) for both scenarios. • NGFS carbon prices were adjusted for inflation and interpolated to an annual basis. • Applied Materials scope 1 and 2 emissions from 2023 to 2040 were estimated based on current business growth and decarbonization projections.

(5.1.1.11) Rationale for choice of scenario

Two future pathways were considered for the climate scenario analysis, in alignment with TCFD recommendations. NGFS informed scenarios related to potential carbon pricing trends. • Low Carbon Pathway: Assumes environmental regulation and collective action will limit the greatest physical impacts of climate change by keeping global temperature increase below 2 degrees Celsius. • High Carbon Pathway: Assumes low collective action against climate change and a greater degree of global warming. The two pathways define a low-to-high envelope of potential risks and impacts so Applied can evaluate the range of possible outcomes and plan accordingly.

- ☒ 2050

(5.1.1.9) Driving forces in scenario

Local ecosystem asset interactions, dependencies and impacts

- ☒ Climate change (one of five drivers of nature change)

(5.1.1.10) Assumptions, uncertainties and constraints in scenario

The IEA scenarios were particularly applied to transition risks relating to market and technology-related risks and opportunities, comparing Applied's year-over-year reductions in Applied Materials scope 3 emissions vs. year-over-year emissions reductions under an IEA NZE2050, as well as forecasted growth in key end-use market shifts for technologies that rely on Applied's products (e.g., solar, wind, battery).

(5.1.1.11) Rationale for choice of scenario

Two future pathways were considered for the climate scenario analysis, in alignment with TCFD recommendations. The IEA models were used for assessing transition risks related to market and technology risks to understand potential trends in either scenario. • Low Carbon Pathway: Assumes environmental regulation and collective action will limit the greatest physical impacts of climate change by keeping global temperature increase below 2 degrees Celsius. • High Carbon Pathway: Assumes low collective action against climate change and a greater degree of global warming. The two pathways define a low-to-high envelope of potential risks and impacts so Applied can evaluate the range of possible outcomes and plan accordingly.

(5.1.1.9) Driving forces in scenario

Local ecosystem asset interactions, dependencies and impacts

☒ Climate change (one of five drivers of nature change)

(5.1.1.10) Assumptions, uncertainties and constraints in scenario

Risks correlated to fluctuations in carbon pricing mechanisms, or those influenced by carbon pricing (proxy for trends in regulatory burden) leveraged climate scenarios from NGFS. • The Net Zero 2050 NGFS scenario was used to model a low-carbon pathway, while the Current Policies NGFS scenario was used to model a high-carbon pathway. • The REMIND-MAgPIE model was used to determine future carbon prices (US\$2024 per tCO₂) for both scenarios. • NGFS carbon prices were adjusted for inflation and interpolated to an annual basis. • Applied Materials scope 1 and 2 emissions from 2023 to 2040 were estimated based on current business growth and decarbonization projections

(5.1.1.11) Rationale for choice of scenario

Two future pathways were considered for the climate scenario analysis, in alignment with TCFD recommendations. NGFS informed scenarios related to potential carbon pricing trends. • Low Carbon Pathway: Assumes environmental regulation and collective action will limit the greatest physical impacts of climate change by keeping global temperature increase below 2 degrees Celsius. • High Carbon Pathway: Assumes low collective action against climate change and a greater degree of global warming. The two pathways define a low-to-high envelope of potential risks and impacts so Applied can evaluate the range of possible outcomes and plan accordingly.

- ☒ Capacity building
- ☒ Target setting and transition planning

(5.1.2.2) Coverage of analysis

Select from:

- ☒ Organization-wide

(5.1.2.3) Summarize the outcomes of the scenario analysis and any implications for other environmental issues

In FY24 refined its climate and water risks and opportunities assessment in alignment with TCFD guidelines. This year's refinement built on the more comprehensive assessment that was conducted the year prior. A diverse group of stakeholders are engaged annually in the assessment process, representing various parts of

Applied's business to ensure that varying perspectives were incorporated and that outcomes of the assessment would be shared and integrated across teams. Key findings: 1) Physical risks: The magnitude of exposure to physical risks is projected to vary geographically and temporally across value-chain and scenarios. o Applied is projected to face increased exposure to hazards, particularly in Southeast Asia and the Middle East, under both High and Low Carbon Pathways o On average, Applied is projected to face the greatest increase in exposure to extreme heat, drought, and storms. For example, between 2020 and 2040, extreme heat is projected to increase by more than 70% in a third of Applied site locations. 2) Carbon pricing o Operating costs are projected to increase under a Low Carbon Pathway as the cost of carbon increases. o The price of carbon is expected to increase to 229 per ton of CO₂e by 2030 under a Low Carbon Pathway 3) Regulations on process chemicals o Compliance costs are projected to increase under a Low Carbon Pathway as regulatory requirements on process gases increase. o Applied is mitigating these risks by identifying solutions that reduce the use of fluorinated process gases, increase abatement, and/or enable the use of non-fluorinated alternatives. 4) R&D pressure o Applied may need to increase R&D spend to meet demand for products that support decarbonization. o Continued growth in R&D can position Applied to meet the innovation demands of transitioning to a lower-carbon economy. 5) Customer preferences o Many Applied customers are targeting Net Zero by 2040 or 2050 and are depending on less emissions-intensive manufacturing tools to help them achieve these goals. o Applied faces both risks and opportunities depending on the company's ability to meet shifting customer demand. Continued innovation to develop more sustainable products could help customers achieve their goals and preserve Applied Materials' market share. o Certain end-use markets that are key to the global climate transition, such as grid decarbonization technologies and electric vehicles (Applied's "ICAPS" business), are expected to drive business expansion opportunities. Resulting actions: • Applied incorporates considerations for climate/environmental risks and opportunities in its annual ERM survey that broadly assesses risks across the enterprise. Key business leaders are also included in the annual in-depth climate and water risk assessment process to ensure awareness, gain input, and elicit action/management of any material risks and opportunities. Findings are shared with Applied's facilities, EHS, and BCP teams to highlight any mitigating measures that should be taken at relevant sites. • Key risks and opportunities are driving a variety of strategies and associated financial planning. These include: o Continued investment into R&D and capital allocation for building out Applied's portfolio of eco-advantaged products and services to ensure delivery of solutions that help customers achieve their goals. o Planning CAPEX/OPEX to ensure the company stays on track to meeting its renewable energy and emissions reduction targets by 2030. In FY24 this included capital for onsite solar arrays at Tainan, Taiwan and Singapore manufacturing facilities. Capital was also put towards continuous energy efficiency improvements. • Progress was made towards Applied's Net Zero 2040 Playbook in FY24, which charts our roadmap towards achieving Net Zero emissions across our Scope 1, 2, and 3 emissions. It includes science-based targets and defines the plan for how the company intends to achieve its targets and which actions it will prioritize to mitigate risks and capitalize on opportunities. • The scenario analysis illuminates key risks and opportunities that relate to Applied's products and services, demonstrating that our business model and strategy can be leveraged to drive decarbonization by delivering more energy and chemical optimized products, developing solutions that help customers manage their environmental impacts and meet climate goals, and enable key end-use technologies that will be critical in the transition to a decarbonized economy.

☒ Organization-wide

(5.1.2.3) Summarize the outcomes of the scenario analysis and any implications for other environmental issues

In FY24 Applied refined its climate and water risks and opportunities assessment in alignment with TCFD guidelines, which considered a prioritized set of both physical and transition risks across its value chain over short-, medium-, and long-term time horizons, and over various climate scenarios. Water-related risks were assessed across all three time periods. The analysis was updated to the WRI Aqueduct 4.0 water risk framework to project future water stress under three scenarios (SSP2-RCP4.5, SSP2-RCP8.5, and SSP3-RCP8.5) and medium-term and long-term time horizons. This quantitative approach was supplemented by qualitative analysis of three other elements of water risk: power supply, water quality, and water-related conflict. A diverse group of stakeholders participated in the process, representing various parts of Applied's business to ensure that varying perspectives were incorporated into the analysis and that outcomes of the assessment would be shared and integrated across relevant teams. Key findings and outcomes: •Eight site locations assessed have high or extremely high baseline water stress: Rehovot, Israel; Xi'an, China; Shanghai, China; Bangalore, India; Chennai, India; Tracy, CA; Tempe, AZ; Alzenau, Germany. (However, based on the current levels of water use at the sites, only Rehovot and Xi'an are considered sites sensitive to water stress risks). •The water stress levels in these regions are expected to stay high in both the low and high carbon scenarios by 2030 •Additionally, water stress levels in Austin, Texas are projected to increase to high levels by 2030 • Several Applied Materials sites rely on hydroelectric or thermoelectric power, which is expected to decrease because of limited water availability. For example, in the U.S., thermoelectric power capacity is projected to decline by 12% in RCP8.5 by 2030. Significant water quality degradation is also expected under RCP8.5 by 2050, which could impact Applied Materials and its customers who rely on ultrapure water in production processes. Resulting actions: •Updated physical and water risks findings are shared with Applied's facilities, EHS, and BCP teams on an annual basis to inform any additional mitigating measures that should be taken at relevant sites. In FY24 Facilities teams implemented water efficiency measures at a high-water-risk site which included rainwater recycling for irrigation, reuse of DI system water, and reclaim of RO concentrated water..

[Fixed row]

(5.2) Does your organization's strategy include a climate transition plan?

(5.2.1) Transition plan

Select from:

☒ Yes, we have a climate transition plan which aligns with a 1.5°C world

(5.2.3) Publicly available climate transition plan

Select from:

☒ Yes

(5.2.4) Plan explicitly commits to cease all spending on, and revenue generation from, activities that contribute to fossil fuel expansion

Select from:

☒ No, and we do not plan to add an explicit commitment within the next two years

(5.2.6) Explain why your organization does not explicitly commit to cease all spending on and revenue generation from activities that contribute to fossil fuel expansion

Applied's business is not directly involved in the fossil fuel sector and does not generate revenue from activities that directly contribute to fossil fuel expansion. Our Net Zero 2040 Playbook™ articulates the company's objective to transition to clean power sources across its operations and value chain, as this is the primary mechanism to achieving the Playbook's ambitions. We plan to drive grid decarbonization through collective action and policy engagement, by engaging customers to support them in their decarbonization efforts and working with key suppliers to enable their transition to clean power across their operations. Applied also has goals to reach 100% renewable electricity by 2030, which requires the business to not only procure clean energy but also minimize the use of fossil fuels like natural gas across its operations and in new construction to the extent possible. Although the company is taking action to minimize its dependence on fossil fuels, an explicit commitment to cease all spending on fossil fuels is not feasible due to the technical requirements of our R&D lab operations and the availability and cost of alternative technologies and fuels in the markets where Applied operates.

(5.2.7) Mechanism by which feedback is collected from shareholders on your climate transition plan

Select from:

☒ We have a different feedback mechanism in place

(5.2.8) Description of feedback mechanism

Applied Materials gathers feedback from shareholders through a series of investor outreach meetings conducted throughout the year.

(5.2.9) Frequency of feedback collection

Select from:

☒ Annually

(5.2.10) Description of key assumptions and dependencies on which the transition plan relies

Key assumptions and dependencies include: • Continuing trends in grid decarbonization and expansion of related enabling technologies and policies as detailed and forecast in the International Energy Agency's (IEA's) annual reports and scenarios (Stated policies vs. Net Zero) • Governments stay reasonably on track towards meeting their stated grid decarbonization targets • External mechanisms that Applied has no control over, such as regulations, tariffs, and geopolitics, don't substantially derail the access or costs for key enabling technologies such as solar, wind, and batteries • Customers stay reasonably on track towards meeting their stated public climate commitments, and make product and service purchasing decisions that align with these commitments • Suppliers take action to reduce emissions at minimum in line with a well-below-2°C pathway

(5.2.11) Description of progress against transition plan disclosed in current or previous reporting period

Applied has begun implementation of its Net Zero 2040 Playbook, which has included establishing an internal Net Zero Leadership Council comprised of a diverse group of about 20 leaders from across the business with responsibility and accountability for ensuring the company progresses against the Playbook. In addition, a 3-year roadmap of key actions was developed to help define key enabling actions to support our staying on track with the Playbook, and annual interim milestones were defined for each of the related workstreams (e.g., Scope 1 and 2 emission, grid decarbonization, customer engagement, product efficiency, supplier engagement, and transparency and reporting) with defined team leaders and supporting teams. These objectives are part of Applied's Corporate Scorecard, and progress is reported to the Executive Leadership Team and the Board's Corporate Governance and Nominating Committee on a quarterly basis. Details on progress across our GHG emission and energy metrics are detailed in section 7.

- ☒ Climate change

(5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

As customer preferences shift toward more energy-efficient products, Applied Materials has and continues to develop technologies that allow customers to reduce emissions from their own operations. For example, Applied Materials offers its Sculptra Pattern-Shaping System, which eliminates an entire EUV mask layer from a wafer process flow, thereby enabling energy savings of more than 15kWh per wafer. Other Applied technologies are aimed at reducing the power consumption of manufacturing semiconductor chips and providing more effective process gas abatement solutions. We also produce systems and services to improve the overall energy efficiency of semiconductor fabrication facilities. Applied is also monitoring how carbon pricing mechanisms can incentivize the adoption of such solutions at customer fabs. These strategies are being implemented and monitored in the immediate-to-short-term (1-5 years) and medium-term (6-10 years).

- ☒ Climate change

(5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

Applied Materials' tier 1 supply chain, consisting of over 3,000 suppliers, is spread across the globe. Given Applied Materials' supply chain is geographically diverse, well-coordinated and proficient at managing continuity risks, recent impacts of severe weather events, such as typhoons and hurricanes, have been relatively modest. Applied Materials is currently assessing its top (approximately 80% by spend) suppliers on environmental performance via the Responsible Business Alliance (RBA) self-assessment questionnaire, which asks suppliers to report on their GHG tracking, goals, and initiatives, as well as a targeted GHG survey. Suppliers considered high risk (evaluated each year) are audited against the framework. This strategy is being implemented and monitored in the immediate-to-short-term (1-5 years) and medium-term (6-10 years).

Select all that apply

☒ Climate change

(5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

As Applied Materials expands its operations to meet growing semiconductor demand, we are integrating climate considerations into the evaluation of new construction and leases, such as access to a stable supply of energy and water. For example, we are adjusting energy modeling for our new R&D facilities to ensure we are planning for energy demands in a warming climate and building in water recycling processes. We are also continuously investing in optimizing existing operations, particularly in our energy-intensive R&D labs to ensure we stay on a trajectory to meet our science-based targets in order to mitigate the risks associated with potential carbon pricing schemes. These strategies are being implemented and monitored in the immediate-to-short-term (1-5 years) and medium-term (6-10 years).

[Add row]

(5.3.2) Describe where and how environmental risks and opportunities have affected your financial planning.

- ☒ Capital expenditures
- ☒ Capital allocation

(5.3.2.2) Effect type

Select all that apply

- ☒ Risks
- ☒ Opportunities

(5.3.2.3) Environmental issues relevant to the risks and/or opportunities that have affected these financial planning elements

Select all that apply

- ☒ Climate change

(5.3.2.4) Describe how environmental risks and/or opportunities have affected these financial planning elements

• *Capital Allocation: As customer purchasing behaviors shift and regulations emerge and evolve in the short-term, Applied Materials has an opportunity to develop technologies that meet more stringent efficiency and emissions requirements. The company invests R&D funds to test and develop a suite of products that deliver improved energy performance and reduced chemical impact. For example, Applied Materials is deploying Vistara, Applied's first purpose-built platform that combines and co-optimizes multiple process steps within a single tool, resulting in an estimated 35% reduction in platform energy consumption and about 30% reduction in chemical footprint for etch applications.* • *Indirect costs: To increase resiliency, reduce operating costs, and meet our 100% renewable electricity goals, Applied Materials has been and continues to evaluate and procure renewable sources of electricity through on-site solar arrays, utility green energy programs, and a virtual power purchase agreement (VPPA). In FY2 we began an RFP and search for a new VPPA in the U.S. and evaluating PPA opportunities in India.* • *Capital expenditures: Applied Materials has invested and continues to evaluate investments in renewable energy projects such as on-site solar, as well as operation efficiency projects such as lighting retrofits or upgrades to more efficient equipment. Projects are evaluated using Applied Materials' standard capital project evaluation process based on their projected financial performance and strategic value. In FY24, this included capital to procure more efficient equipment and systems for Applied's new EPIC R&D lab, including the selection of an electric-powered (instead of natural gas) VOC abatement unit and an advanced Heat Recovery System.* [Add row]

(5.4) In your organization's financial accounting, do you identify spending/revenue that is aligned with your organization's climate transition?

	Identification of spending/revenue that is aligned with your organization's climate transition
	Select from: <input checked="" type="checkbox"/> No, and we do not plan to in the next two years

[Fixed row]

(5.9) What is the trend in your organization's water-related capital expenditure (CAPEX) and operating expenditure (OPEX) for the reporting year, and the anticipated trend for the next reporting year?

(5.9.1) Water-related CAPEX (+/- % change)

-85

(5.9.2) Anticipated forward trend for CAPEX (+/- % change)

200

(5.9.3) Water-related OPEX (+/- % change)

5

(5.9.4) Anticipated forward trend for OPEX (+/- % change)

5

(5.9.5) Please explain

In FY24, we experienced an 85% decrease in water-related capital expenditure (CAPEX) compared to FY23. This decline reflects the completion of a major infrastructure project in the prior year, resulting in significantly lower capital investment needs during FY24. For FY25, we anticipate a 200% increase in water-related

CAPEX relative to FY24, based on actual spend data from FY25 Q1-Q3. This increase is driven by planned upgrades to water systems and infrastructure, which are part of our long-term asset management of aging systems that must be replaced as they reach end of life. Water-related CAPEX can vary significantly year-over-year due to the timing and scale of large capital projects, such as wastewater treatment improvements or infrastructure replacements. We anticipate a 5% increase in OpEx spend, as demand for equipment is projected to increase over the next several years, we are investing in more facilities globally, thus driving an increased usage of water (and all utilities).
[Fixed row]

(5.10) Does your organization use an internal price on environmental externalities?

	Select from: <input checked="" type="checkbox"/> Yes	Select all that apply <input checked="" type="checkbox"/> Carbon

[Fixed row]

(5.10.1) Provide details of your organization’s internal price on carbon.

Row 1

(5.10.1.1) Type of pricing scheme

Select from:
☒ Shadow price

(5.10.1.2) Objectives for implementing internal price

Select all that apply
☒ Conduct cost-benefit analysis
☒ Drive energy efficiency
☒ Incentivize consideration of climate-related issues in decision making

- ☒ Identify and seize low-carbon opportunities

(5.10.1.3) Factors considered when determining the price

Select all that apply

- ☒ Price/cost of voluntary carbon offset credits
- ☒ Scenario analysis

(5.10.1.4) Calculation methodology and assumptions made in determining the price

Applied's sustainability team has engaged a broad variety of carbon removal project developers spanning both nature-based and engineered solutions over the last two years to build an understanding of the market landscape, including current pricing information. Applied also worked with a consultant specializing in carbon markets to conduct a landscape assessment and screened projects against quality criteria set by Applied to better understand the carbon removal options available. Through this research we have gained a solid understanding of the price ranges per ton of CO2 removed. In addition, carbon pricing was included in Applied's annual climate scenario analysis, which uses carbon pricing data from the NGFS data explorer for the REMIND-MagPIE integrated assessment model, which compared "Stated Policies" (lower carbon price) and "Net Zero 2050" (high carbon price) scenarios over the short-, medium-, and long-term.

(5.10.1.5) Scopes covered

Select all that apply

(5.10.1.8) Pricing approach used – temporal variance

Select from:

- ☒ Evolutionary

(5.10.1.9) Indicate how you expect the price to change over time

Applied has considered several growth scenarios leveraging projections from external sources such as Trove Research, EY, and BloombergNEF, which have shown a range of compounded annual growth rates from 4%-15% depending on the timeframe. Applied recognizes there may be varying projections depending on the project type (nature-based projects are supply constrained, potentially increasing prices in the future, while engineered projects will likely scale and prices may decline). The NGFS data explorer for the REMIND-MagPIE integrated assessment model also has specific price growth projection by country across the “Stated Policies” (lower carbon price) and “Net Zero 2050” (high carbon price) scenarios.

80

(5.10.1.15) Pricing approach is monitored and evaluated to achieve objectives

Select from:

- ☒ Yes

(5.10.1.16) Details of how the pricing approach is monitored and evaluated to achieve your objectives

The sustainability team continues to monitor shifts in the carbon removals market on a regular basis throughout the year through our engagement with project developers and a carbon markets consultant. The team keeps internal stakeholders updated on current price assumptions as these are factored into financial analyses for various projects. Carbon prices have been factored into a variety of projects that support Applied's decarbonization efforts across Scope 1, 2 and 3 emissions, including making the case for replacing less efficient facilities equipment (i.e., boilers, chillers), considering the switch to electrified or plasma-powered R&D process tool abatement systems, and demonstrating the business case for Applied's own eco-advantaged products that support our customer's chip manufacturing decarbonization efforts.

(5.11.1) Does your organization assess and classify suppliers according to their dependencies and/or impacts on the environment?

Climate change

(5.11.1.1) Assessment of supplier dependencies and/or impacts on the environment

Select from:

☒ Yes, we assess the dependencies and/or impacts of our suppliers

(5.11.1.2) Criteria for assessing supplier dependencies and/or impacts on the environment

Select all that apply

☒ Contribution to supplier-related Scope 3 emissions

(5.11.1.3) % Tier 1 suppliers assessed

Select from:

☒ 76-99%

(5.11.1.4) Define a threshold for classifying suppliers as having substantive dependencies and/or impacts on the environment

Top 80% of spend and covering over 70% of Scope 3 Category 1 GHG emissions.

(5.11.1.5) % Tier 1 suppliers meeting the threshold for substantive dependencies and/or impacts on the environment

Select from:

☒ 76-99%

(5.11.1.6) Number of Tier 1 suppliers meeting the thresholds for substantive dependencies and/or impacts on the environment

Water

(5.11.1.1) Assessment of supplier dependencies and/or impacts on the environment

Select from:

☒ Yes, we assess the dependencies and/or impacts of our suppliers

(5.11.1.2) Criteria for assessing supplier dependencies and/or impacts on the environment

Select all that apply

☒ Dependence on water

(5.11.1.3) % Tier 1 suppliers assessed

Select from:

☒ 76-99%

(5.11.1.4) Define a threshold for classifying suppliers as having substantive dependencies and/or impacts on the environment

Applied Materials uses the RBA's RMI Global Risk Map to assess suppliers who in total represent approximately 80% of Applied Materials' procurement spend. The assessment results in a risk score that considers a variety of categories, including water stress-related risk which leverages the WRI water stress index. The parameters to determine highest priority sites include a "High" water stress index rating and those that are considered higher spend suppliers.

(5.11.1.5) % Tier 1 suppliers meeting the threshold for substantive dependencies and/or impacts on the environment

Select from:

☒ 51-75%

(5.11.1.6) Number of Tier 1 suppliers meeting the thresholds for substantive dependencies and/or impacts on the environment

109

[Fixed row]

(5.11.2) Does your organization prioritize which suppliers to engage with on environmental issues?

Climate change

(5.11.2.1) Supplier engagement prioritization on this environmental issue

Select from:

☒ Yes, we prioritize which suppliers to engage with on this environmental issue

(5.11.2.2) Criteria informing which suppliers are prioritized for engagement on this environmental issue

Select all that apply

☒ In line with the criteria used to classify suppliers as having substantive dependencies and/or impacts relating to climate change

☒ Business risk mitigation

☒ Procurement spend

☒ Strategic status of suppliers

☒ Other, please specify :Supplier's willingness / ambition

(5.11.2.4) Please explain

Approximately 13% of our Scope 3 FY23 emissions lie in the Purchased Goods and Services category, demonstrating the importance of engaging and surveying suppliers responsible for this emissions category. Applied Materials evaluates material ESG impacts within our supply chain, including climate and energy performance, by assessing the top (approximately 80% of spend) of our suppliers by spend for compliance with the Responsible Business Alliance (RBA) code of conduct and by assessing their GHG programs with an additional GHG focused survey. Data is collected and analyzed on an annual basis and is augmented with further external research of climate-related goals and metrics using publicly available information.

Water

(5.11.2.1) Supplier engagement prioritization on this environmental issue

Select from:

☒ Yes, we prioritize which suppliers to engage with on this environmental issue

(5.11.2.2) Criteria informing which suppliers are prioritized for engagement on this environmental issue

Select all that apply

- ☒ In line with the criteria used to classify suppliers as having substantive dependencies and/or impacts relating to water
- ☒ Business risk mitigation
- ☒ Procurement spend
- ☒ Strategic status of suppliers

(5.11.2.4) Please explain

Applied Materials uses the RBA's Responsible Minerals Initiative (RMI) Global Risk Map to assess suppliers who in total represent approximately 80% of Applied Materials' procurement spend. The assessment results in a risk score that considers a variety of categories, including water-related risk. When looking at the four water- and wastewater-related risk scores in isolation, 94 suppliers are identified as having a substantive impact, which is less than 2% of total suppliers. The threshold used to identify substantive impact is any score less than 2.5, which is the highest risk band used by the RMI Global Risk Map.

[Fixed row]

(5.11.5) Do your suppliers have to meet environmental requirements as part of your organization's purchasing process?

Climate change

(5.11.5.1) Suppliers have to meet specific environmental requirements related to this environmental issue as part of the purchasing process

Select from:

- ☒ Yes, environmental requirements related to this environmental issue are included in our supplier contracts

(5.11.5.2) Policy in place for addressing supplier non-compliance

Select from:

- ☒ Yes, we have a policy in place for addressing non-compliance

(5.11.5.3) Comment

Applied Materials expects its suppliers representing approximately 80% of procurement spend to disclose their available climate and energy data as part of the annual RBA assessment process. Applied Materials uses an environmental survey to capture information on total scope 1, 2, and 3 greenhouse gas emissions, energy and water consumption, waste generation, any goals/targets suppliers have set to improve their performance, and where more information regarding their

climate, energy and water programs can be found. In addition, Applied Materials reviews suppliers' publicly available sustainability reports and CDP disclosures to track and validate climate-related data. Applied's Supplier Sustainability Requirements document is incorporated into our Global Supplier Agreements and other agreements with direct and indirect suppliers. These requirements are also included in the terms and conditions for logistics suppliers and all purchase order transactions and are enumerated in our most commonly used agreements for indirect services.

Water

(5.11.5.1) Suppliers have to meet specific environmental requirements related to this environmental issue as part of the purchasing process

Select from:

☒ Yes, suppliers have to meet environmental requirements related to this environmental issue, but they are not included in our supplier contracts

(5.11.5.2) Policy in place for addressing supplier non-compliance

Select from:

☒ Yes, we have a policy in place for addressing non-compliance

(5.11.5.3) Comment

Applied expects its suppliers representing approximately 80% of procurement spend to comply with the RBA Code of Conduct and complete the annual self-assessment questionnaire, which addresses issues related to water withdrawal tracking, management, and conservation. Applied's Supplier Sustainability Requirements document is incorporated into our Global Supplier Agreements and other agreements with direct and indirect suppliers. These requirements are also included in the terms and conditions for logistics suppliers and all purchase order transactions and are enumerated in our most commonly used agreements for indirect services.

- ☒ Providing information on appropriate actions that can be taken to address non-compliance

(5.11.6.12) Comment

Suppliers are engaged through the RBA environmental survey and the RBA Facility Self-Assessment Questionnaire (SAQ). 350 of our suppliers (representing more than 80% of Applied's direct procurement spend) have accounts in RBA online. RBA is an ideal platform for this engagement because, although we do not directly require suppliers to complete the water-related questions, suppliers are required to complete an SAQ before we audit their site. Therefore, the number of suppliers that answer these questions continues to grow as we grow our audit scope. Of the 350 suppliers in RBA online, 31% responded to water-related questions in 2024. This data is most impactful in preparation for the supplier audit – the auditor on site can use the survey to address any water management concerns. If there is a finding of non-conformance related to water-management, the supplier is required to develop a corrective action plan. We consider this to be a measure of success – identifying and correcting water management risks at the supplier site through the audit process.

Applied Materials evaluates material sustainability impacts within our supply chain, including climate and energy performance, by assessing the top (approximately 80% of spend) of our suppliers by spend for compliance with the Responsible Business Alliance code of conduct, which requires actions to manage energy consumption and greenhouse gas emissions. Audits are conducted to ensure compliance with the code. Once the audit is completed and the findings are agreed upon, the suppliers work with our SuCCESS2030 team to close issues. At Applied, we require our suppliers to close their priority and major findings within the recommended RBA timeline through additional on-site, third-party audits.

Applied Materials' SuCCESS2030 initiative includes a 10-year roadmap that extends our sustainability vision across our supply chain for semiconductor and display manufacturing. Through this program, Applied Materials communicates its sustainability priorities, including climate and energy-related issues, engages and educates suppliers on expectations, and identifies high risk suppliers who are then audited against the framework. In FY23 Applied began communicating about Applied's Net Zero 2040 Playbook, and the expectation for suppliers to start increasing their procurement of clean energy where feasible. To help accelerate these efforts Applied was a founding member of Catalyze, a semiconductor industry coalition delivering capacity-building training and identifying collective opportunities for renewable energy procurement with fellow members, facilitated by Schneider Electric.

(5.11.7.9) Describe the engagement and explain the effect of your engagement on the selected environmental action

We have escalated the issue of climate and energy management with suppliers through our enhanced effort to gather relevant data from our suppliers covering approximately 80% of spend. Our data collection and communication of our expectation to suppliers that they effectively manage this issue helps drive action in parts of the semiconductor supply chain that have not typically been reached. Key measures of success include increasing supplier response rates to our climate survey (69% for FY24) as well as increasing the proportion of responding suppliers each year who are a) tracking and measuring their energy and emissions and b) establishing GHG reduction goals. As a result of our engagement, we are seeing increasing numbers of suppliers that are actively measuring their energy and GHG emissions, setting reduction goals, and starting to identify strategies to achieve these goals.

- ☒ 26-50%

(5.11.9.4) % stakeholder-associated scope 3 emissions

Select from:

- ☒ 51-75%

(5.11.9.5) Rationale for engaging these stakeholders and scope of engagement

Scope 3 Category 11 covering the use of our semiconductor products in our customer's facilities is the largest contributor to our Scope 3 emissions, representing nearly 80% of our total GHG footprint. Applied Materials cannot achieve its own Scope 3 reduction goals without engaging our customers. We share information with our largest customers by sales and emissions about our low-carbon and more efficient product offerings and will collaborate with customers to model energy savings opportunities and implement solutions, such as our iSystem intelligent controller, which enables tracking of resource consumption, emissions, and other environmental factors. We prioritize our largest customers to amplify the impact these products can have in the market; fortunately, these customers are also generally the ones with their own established climate and energy-related goals and initiatives, which we can support through hardware and software solutions. Much of our footprint depends on how our customers use our equipment; therefore, close collaboration is needed to support the development of lower impact processes.

(5.11.9.6) Effect of engagement and measures of success

With this design support, our product groups' responsibilities extend beyond traditional performance attributes to encompass sustainability performance as well—adding new features to our existing portfolio of energy-saving product enhancements, passing on substantial energy saving opportunities to our customers, and modelling sustainability leadership industry-wide. For example, we have redesigned chillers and chilling processes to reduce GHG intensity, energy and water consumption, locating sensors optimally to collect data and inform sustainability improvements, etc. Through such measures we have enabled annual energy use reductions in the tens of millions of kWh per year for our customers, and we expect this trend to continue to increase in the coming years. Key measures of success include maintaining or increasing engagement with customers representing at least 70% of Scope 3 Category 11 emissions, increasing the total number of energy-saving projects implemented per customer per year, and increasing the total annual savings of such projects in terms of kWh and CO₂e.

Water

☒ Collaborate with stakeholders on innovations to reduce environmental impacts in products and services

(5.11.9.3) % of stakeholder type engaged

Select from:

☒ 1-25%

(5.11.9.5) Rationale for engaging these stakeholders and scope of engagement

Only a few select types of Applied Materials tools require ultrapure water in production processes. Most of our tools only require cooling water, which runs in a closed-loop process and is negligible in terms of water consumption. Because of this, our focus on water has come through the lens of energy efficiency, such as hardware and software processes that reduce water flow and thus the required energy to pump the water. We are working with our largest customers, who collectively represent over 70% of our scope 3 category 11 emissions, to share these types of solutions as a part of our Sustainability Center of Excellence program, which is part of our strategy to optimize our equipment and to drive energy and water reductions with customers where we can make the greatest impact. Applied Materials is also starting to gather water consumption indicators across its tools as a part of our 3x30 product efficiency modelling initiative to identify efficiency opportunities for specific tools so we can engage with customers on options for reducing future water use.

(5.11.9.6) Effect of engagement and measures of success

Engagement success is measured through the total number of projects where efficiency measures are implemented across our tools and the total reductions associated with such projects.

(5.11.9.5) Rationale for engaging these stakeholders and scope of engagement

Applied Materials' investors have a vested interest in the sustainability and success of Applied's business. That includes a desire to understand what actions the company is taking to manage its climate and other environmental impacts, and how its addressing risks and opportunities associated with climate change. Applied Materials engages shareholders through a series of investor outreach meetings conducted throughout the year, where the company's sustainability strategy and targets are reviewed, and opportunities for improvement are discussed. These stakeholders provide valuable input to ensure Applied maintains its leading reputation on sustainability and that we are effectively managing and capitalizing on climate risk and opportunities.

(5.11.9.6) Effect of engagement and measures of success

Applied's investors have positively influenced the ambition and credibility of Applied's overall sustainability program, particularly in the development of the company's Scope 1, 2, and 3 science-based targets, and 2040 Net Zero Playbook. This stakeholder group holds Applied accountable to making progress towards its sustainability commitments and ensures that material sustainability issues are effectively managed. An indirect measure of success includes Applied's strong ESG ratings and rankings, including ISS, MSCI, and Sustainalytics.

(5.11.9.4) % stakeholder-associated scope 3 emissions

Select from:

- ☒ Unknown

(5.11.9.5) Rationale for engaging these stakeholders and scope of engagement

Applied cannot achieve its Net Zero roadmap alone. Collective industry action is required to create the pathway to scale climate-aligned solutions and meet our collective climate targets. That is why Applied actively engages with industry peers, particularly through the SEMI Climate Consortium (SCC), to collaborate and share best practices on ways to advance towards a Net Zero economy. Applied sits on the Governing Council of the SCC and engages in various working groups that address various impacts, including Scope 1, Scope 2, and Scope 3 working groups that are defining industry-specific guidelines and best practices, as well as other groups defining reporting standards and setting the ambition and roadmap for the industry toward Net Zero.

(5.11.9.6) Effect of engagement and measures of success

Applied benefits from industry engagement on many levels. We share and glean best practices, collectively pool our resources and expertise to drive solutions and define strategies and identify new opportunities that could help us collectively meet our climate goals. Key measures of success identified in the SCC include the total

number of companies that are joined as members, the number and % of companies in the membership that are measuring and reporting energy and GHG emission data, and those that are setting emissions reduction targets.

Water

(5.11.9.1) Type of stakeholder

Select from:

☒ Investors and shareholders

(5.11.9.2) Type and details of engagement

Education/Information sharing

☒ Educate and work with stakeholders on understanding and measuring exposure to environmental risks

☒ Share information on environmental initiatives, progress and achievements

(5.11.9.3) % of stakeholder type engaged

Select from:

☒ 26-50%

(5.11.9.5) Rationale for engaging these stakeholders and scope of engagement

Applied's investors have a vested interest in the sustainability and success of Applied's business. That includes a desire to understand what actions the company is taking to manage its environmental impacts, including water, and how it is addressing related risks and opportunities. Applied Materials engages shareholders through a series of investor outreach meetings conducted throughout the year, where the company's sustainability strategy and targets are reviewed, and opportunities for improvement are discussed. These stakeholders provide valuable input to ensure Applied maintains its leading reputation on sustainability and that we are effectively managing and capitalizing on environmental risk and opportunities.

(5.11.9.6) Effect of engagement and measures of success

Applied investors are interested in understanding how Applied is managing and mitigating water-related risks across its global facilities. Through our engagement we have improved their understanding of Applied's water footprint and areas of potential risk and how those are being mitigated through facilities improvements such as water recycling measures and rainwater capture.

[Add row]

(5.13) Has your organization already implemented any mutually beneficial environmental initiatives due to CDP Supply Chain member engagement?

(5.13.1) Environmental initiatives implemented due to CDP Supply Chain member engagement

Select from:

☒ No, and we do not plan to within the next two years

(5.13.2) Primary reason for not implementing environmental initiatives

Select from:

☒ Other, please specify :We drive implementation of environmental initiatives through other channels (industry groups, partnership, etc.)

(5.13.3) Explain why your organization has not implemented any environmental initiatives

Applied has implemented various environmental initiatives across its business and value chain through other channels (industry groups, partnership, etc.), but none have been driven by CDP Supply Chain engagement.

[Fixed row]

C6. Environmental Performance - Consolidation Approach

(6.1) Provide details on your chosen consolidation approach for the calculation of environmental performance data.

Climate change

(6.1.1) Consolidation approach used

Select from:

☒ Operational control

(6.1.2) Provide the rationale for the choice of consolidation approach

The operational control approach is the standard way relevant data is tracked across the business and most accurately reflects where the company has control over the related impacts.

Water

(6.1.1) Consolidation approach used

C7. Environmental performance - Climate Change

(7.1) Is this your first year of reporting emissions data to CDP?

Select from:

☒ No

(7.1.1) Has your organization undergone any structural changes in the reporting year, or are any previous structural changes being accounted for in this disclosure of emissions data?

	Has there been a structural change?
	Select all that apply <input checked="" type="checkbox"/> No

[Fixed row]

(7.1.2) Has your emissions accounting methodology, boundary, and/or reporting year definition changed in the reporting year?

(7.1.2.1) Change(s) in methodology, boundary, and/or reporting year definition?

Select all that apply

☒ Yes, a change in methodology

(7.1.2.2) Details of methodology, boundary, and/or reporting year definition change(s)

For FY24, Scope 2 market-based emissions factors were updated to use AIB European Residual Mix (2023) rather than IEA Factors for EU sites. FY23 Scope 2 market-based emissions were updated to correct for a calculation error. We identified an error in our 2024 CDP submission regarding the 2019 baseline location-based Scope 2 emissions. The value was incorrectly reported as 144,371 and has been corrected to 144,672 in our 2025 response. This correction reflects a reporting error, not a restatement of our baseline. Scope 3 emission factors for FY24 data were updated to the latest version of the 2024 US EPA EEIO, using a spend-based calculation for Categories 1, 2, 4, 15 and a portion of 6. For Category 3, we updated FY24 to refine our methodology to be more geographically localized, and we used updated emission factors from the U.K.'s Department for Environment, Food & Rural Affairs (DEFRA). For Category 11, we restated historical emissions for FY19, FY21, FY22, and FY23 based on refinements to the modeling of product use-phase emissions. Applied's Sustainability Center of Excellence continues to update and reflect the updated energy and chemical impact of our sold tool base. For FY2024, we updated to the International Energy Agency (IEA) grid factors for the countries where we ship our tools. We also applied the updated IEA grid factors to 2019-2023 emissions, resulting in minor changes to CO2 footprint compared to previously reported numbers. For process gas-related emissions, the Global Warming Potential (GWP) values were updated from the International Panel on Climate Change (IPCC) Fifth Assessment Report (AR5) to AR6 in 2023. For Category 5, we restated the historical data for FY21, FY22, FY23 and updated FY24 to correct the U.S. EPA Waste Reduction Model (WARM) emission factor to exclude avoided emissions.

[Fixed row]

(7.1.3) Have your organization's base year emissions and past years' emissions been recalculated as a result of any changes or errors reported in 7.1.1 and/or 7.1.2?

(7.1.3.1) Base year recalculation

Select from:

☒ Yes

(7.1.3.2) Scope(s) recalculated

Select all that apply

☒ Scope 2, market-based

☒ Scope 3

(7.1.3.3) Base year emissions recalculation policy, including significance threshold

Applied triggers a base year inventory recalculation when the variance is greater than 5% within a reporting category.

(7.1.3.4) Past years' recalculation

Select from:

☒ Yes

[Fixed row]

(7.2) Select the name of the standard, protocol, or methodology you have used to collect activity data and calculate emissions.

Select all that apply

☒ The Greenhouse Gas Protocol: Scope 2 Guidance

☒ US EPA Emissions & Generation Resource Integrated Database (eGRID)

☒ The Greenhouse Gas Protocol: Corporate Value Chain (Scope 3) Standard

☒ 2019 Refinement to the 2006 IPCC Guidelines for National Greenhouse Gas Inventories

☒ The Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard (Revised Edition)

☒ US EPA Center for Corporate Climate Leadership: Direct Emissions from Mobile Combustion Sources

☒ US EPA Center for Corporate Climate Leadership: Direct Emissions from Stationary Combustion Sources

(7.3) Describe your organization's approach to reporting Scope 2 emissions.

(7.3.1) Scope 2, location-based

Select from:

☒ We are reporting a Scope 2, location-based figure

(7.3.2) Scope 2, market-based

Select from:

☒ We are reporting a Scope 2, market-based figure

(7.3.3) Comment

Many of our operations are located in regions that have substantial quantities of renewable electricity sources available. To capture these benefits we are reporting both market-based and location-based figures. Market-based emissions incorporate any renewable energy that we procure through VPPAs, PPAs, Green Tariffs (utility supplier specific emission factors), and unbundled RECs. Market-based emissions for our sites in the EU incorporate AIB Residual Mix factors (2023).
[Fixed row]

(7.4) Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1, Scope 2 or Scope 3 emissions that are within your selected reporting boundary which are not included in your disclosure?

Select from:

☒ Yes

(7.4.1) Provide details of the sources of Scope 1, Scope 2, or Scope 3 emissions that are within your selected reporting boundary which are not included in your disclosure.

Row 1

(7.4.1.1) Source of excluded emissions

Emissions associated with the direct energy required to power Applied Display products sold in FY24

(7.4.1.2) Scope(s) or Scope 3 category(ies)

Select all that apply

☒ Scope 3: Use of sold products

(7.4.1.6) Relevance of Scope 3 emissions from this source

Select from:

☒ Emissions are relevant but not yet calculated

(7.4.1.9) Estimated percentage of total Scope 3 emissions this excluded source represents

(7.4.1.10) Explain why this source is excluded

Applied does not have the same level of data granularity available for its Display products to enable the calculation of use-phase emissions. Because this category of products represented just 5% of FY24 revenues it has not been deemed material to total Scope 3 Category 11 emissions.

(7.4.1.11) Explain how you estimated the percentage of emissions this excluded source represents

Display and Adjacent Markets net sales as a percentage out of total Applied net sales in FY24 was 5%. This fraction of total Category 11 energy-related emissions represents 3% of total Scope 3 emissions.

[Add row]

(7.5) Provide your base year and base year emissions.

Scope 1

(7.5.1) Base year end

10/31/2019

(7.5.2) Base year emissions (metric tons CO₂e)

35225

(7.5.3) Methodological details

Scope 1 emissions follow an operational control boundary across all global sites. Greenhouse gas (GHG) emissions are calculated following the GHG Protocol, covering all greenhouse gases included in the Kyoto Protocol: CO₂, CH₄, N₂O, HFCs, PCFs, SF₆, and NF₃ and include sources from stationary combustion, mobile combustion, refrigerants, and process emissions. Process Gas GHG emissions are estimated using 2006 IPCC Guidelines for National Greenhouse Gas Inventories.

Scope 2 (location-based)

(7.5.1) Base year end

10/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

144672

(7.5.3) Methodological details

Scope 2 emissions follow an operational control boundary across all global sites. Emissions are calculated following the GHG Protocol using published emission factors such as eGRID, IEA, and EIA CBECS. Scope 2 GHG emissions will primarily be calculated from metered electricity consumption. Informed estimations are used where primary data is limited or unavailable. We identified an error in our 2024 CDP submission regarding the 2019 baseline location-based Scope 2 emissions. The value was incorrectly reported as 144,371 and has been corrected to 144,672 in our 2025 response. This correction reflects a reporting error, not a restatement of our baseline. The update is immaterial to overall Scope 2 Location-Based emissions.

Scope 2 (market-based)

(7.5.1) Base year end

10/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

78677

(7.5.3) Methodological details

Scope 2 emissions follow an operational control boundary across all global sites. Emissions are calculated following the GHG Protocol and Emissions First principles for market-based calculations using a variety of emission factor sources, including supplier-specific factors (where available), eGRID, IEA, EIA CBECS. Informed estimations are used where primary data is limited or unavailable. Market-based emissions incorporate any renewable energy that we procure through VPPAs, PPAs, Green Tariffs (utility supplier specific emission factors), and unbundled RECs.

Scope 3 category 1: Purchased goods and services

(7.5.1) Base year end

10/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

1862516

(7.5.3) Methodological details

Spend-based analysis of total 2019 direct and indirect spend using 2019 U.S. EPA EEIO factors

Scope 3 category 2: Capital goods

(7.5.1) Base year end

10/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

61953

(7.5.3) Methodological details

Spend-based analysis of total 2019 capital spend using 2019 U.S. EPA EEIO factors

Scope 3 category 3: Fuel-and-energy-related activities (not included in Scope 1 or 2)

(7.5.1) Base year end

10/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

36012

(7.5.3) Methodological details

Average-data method using total 2019 energy consumption by source and 2019 DEFRA fuels and T&D emission factors. Well-to-tank (WTT) emissions from Transmission & Distribution (T&D) losses are not included.

Scope 3 category 4: Upstream transportation and distribution

(7.5.1) Base year end

10/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

567080

(7.5.3) Methodological details

Spend-based analysis of total 2019 transportation and distribution spend by mode (air, ocean, ground) using 2019 U.S. EPA EEIO factors.

Scope 3 category 5: Waste generated in operations

(7.5.1) Base year end

10/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

531

(7.5.3) Methodological details

2019 waste tonnage by disposal method using relevant 2019 DEFRA waste emission factors. Represents data from over 80% of sites by square footage.

Scope 3 category 6: Business travel

(7.5.1) Base year end

10/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

97953

(7.5.3) Methodological details

Air travel calculated using total 2019 distances traveled by cabin type multiplied by the relevant DEFRA business travel emission factor; Hotel stays based on total number of nights multiplied by the 2019 DEFRA hotel stay emission factors; Vehicle rentals based on total 2019 spend using 2019 U.S. EPA EEIO factors

Scope 3 category 7: Employee commuting

(7.5.1) Base year end

10/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

76751

(7.5.3) Methodological details

Estimated using total 2019 employee headcount by region; Assumption on proportion of employees in each region commuting by various transportation modes and average distances travelled (based on country census or commuter survey data); Calculated using the relevant 2019 DEFRA transportation mode factor

Scope 3 category 8: Upstream leased assets

(7.5.1) Base year end

10/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

2601

(7.5.3) Methodological details

Includes leased vehicles and equipment with total 2019 fuel consumption or mileage using 2019 DEFRA fuel and vehicle factors. Where fuel consumption or distance is not available, estimates are used based on number and type of vehicles.

Scope 3 category 9: Downstream transportation and distribution

(7.5.1) Base year end

10/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

191577

(7.5.3) Methodological details

Estimated using total number of shipped units in 2019 with an average weight per unit and a breakdown of which global regions they were shipped to; The average distance per unit was estimated using the most common shipping locations; The mode of transport breakdown was based on available outbound data; Calculated using the relevant 2019 U.S. EPA ton-mile factor

Scope 3 category 10: Processing of sold products

(7.5.3) Methodological details

Not applicable - Applied's products are not processed by customers

Scope 3 category 11: Use of sold products

(7.5.1) Base year end

10/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

9997344

(7.5.3) Methodological details

Calculated based on 2019 sold units using the SEMI S23 standard to model Applied Materials semiconductor tools' annual energy consumption across product categories, multiplied by an average 10-year product lifespan. Emissions in this category include the energy, chemicals and gases used by Applied products as well as the ancillary equipment required to power Applied products. The category also includes emissions from the combustion of natural gas in point-of-use abatement systems where applicable. Category 11 emissions do not yet include emissions from refurbished tools, nor from Applied's Display business (which represented 11%

of total net sales in 2019). We will incorporate these emissions estimates in future reporting years. We restated Category 11 baseline emissions based on refinements to the modeling of product use-phase emissions. Applied's Sustainability Center of Excellence continues to update and reflect the updated energy and chemical impact of our sold tool base. We also applied the updated IEA grid factors to 2019-2023 emissions, resulting in minor changes to CO2 footprint compared to previously reported numbers.

Scope 3 category 12: End of life treatment of sold products

(7.5.1) Base year end

10/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

713

(7.5.3) Methodological details

Using total weight of 2019 shipped units broken down using an assumption on material composition multiplied by the relevant 2019 DEFRA waste factors

Scope 3 category 13: Downstream leased assets

(7.5.1) Base year end

10/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

3330

(7.5.3) Methodological details

Estimated based on square footage of leased assets by building type using CBECS conversion factors.

Scope 3 category 14: Franchises

(7.5.3) Methodological details

Not applicable – Applied does not have any franchises

Scope 3 category 15: Investments

(7.5.1) Base year end

10/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

4492

(7.5.3) Methodological details

Based on investee business sector, total 2019 revenues, and % ownership stake mapped to Trucost sector spend-based emission factors. We excluded investments that are currently divested.

(7.5.3) Methodological details

Not applicable

Scope 3: Other (downstream)

(7.5.3) Methodological details

Not applicable

[Fixed row]

(7.6) What were your organization's gross global Scope 1 emissions in metric tons CO2e?

Reporting year

(7.6.1) Gross global Scope 1 emissions (metric tons CO2e)

50775

(7.6.3) Methodological details

Scope 1 emissions follow an operational control boundary across all global sites. Greenhouse gas (GHG) emissions are calculated following the GHG Protocol, covering all greenhouse gases included in the Kyoto Protocol: CO₂, CH₄, N₂O, HFCs, PFCs, SF₆, and NF₃ and include sources from stationary combustion, mobile combustion, refrigerants, and process emissions. Source of data include purchased quantities of fuels (such as natural gas and heating oil), mobile fuels, added refrigerants, and purchased quantities of process gases. Stationary and mobile combustion emissions are calculated using factors from the U.S. EPA GHG Emission Factors Hub (2024). Process Gas GHG emissions are estimated using 2006 IPCC Guidelines for National Greenhouse Gas Inventories for Electronics Industry Emissions and IPCC Sixth Assessment Report (AR6) GWP values. Process gas emissions for US sites use the California Air Resources Board (CARB) Emissions Estimate Calculator for Semiconductor Operations that is based on 2006 IPCC Tier 2b methodology.

(7.7) What were your organization's gross global Scope 2 emissions in metric tons CO₂e?

Reporting year

(7.7.1) Gross global Scope 2, location-based emissions (metric tons CO₂e)

175667

(7.7.2) Gross global Scope 2, market-based emissions (metric tons CO2e)

67681

(7.7.4) Methodological details

Scope 2 emissions follow an operational control boundary across all global sites. Emissions are calculated following the GHG Protocol. Emissions are calculated using a variety of emission factor sources including EPA eGRID (2022), IEA 2022 (2024 edition), EIA CBECS (2018). Informed estimations are used where primary data is limited or unavailable. Market-based emissions are calculated using utility or site-specific electricity CO2e factors (if applicable); alternatively, emission factors from EPA eGRID (2022), IEA 2022 (2024 edition), and AIB European Residual Mix (2023) are used. For VPPAs, the grid factor specific to the VPPA project location is used for market-based accounting. Market-based emissions incorporate any renewable energy that we procure through VPPAs, PPAs, Utility Green Tariff or Retail, and unbundled RECs.

Scope 2 emissions follow an operational control boundary across all global sites. Emissions are calculated following the GHG Protocol and using a variety of emission factor sources, including eGRID, IEA, EIA CBECS. Informed estimations are used where primary data is limited or unavailable. Market-based emissions incorporate any renewable energy that we procure through VPPAs, PPAs, Green Tariffs (utility supplier specific emission factors), and unbundled RECs. We identified an error in our 2024 CDP submission regarding the 2019 baseline location-based Scope 2 emissions. The value was incorrectly reported as 144,371 and has been corrected to 144,672 in our 2025 response. This correction reflects a reporting error, not a restatement of our baseline. The update is immaterial to overall Scope 2 Location-Based emissions. The update is immaterial to overall Scope 2 Location-Based emissions.

(7.8.3) Emissions calculation methodology

Select all that apply

☒ Spend-based method

(7.8.4) Percentage of emissions calculated using data obtained from suppliers or value chain partners

0

(7.8.5) Please explain

Spend-based analysis of total FY24 direct and indirect spend using 2024 U.S. EPA v1.3 supply chain emission factor dataset by NAICS. Deflators are applied to get equivalent 2024 dollars. The deflator is estimated using the average 2023 annual consumer price index value. At the time of analysis 2024 CPI data was not available, so it was assumed that CPI for year 2024 is twice the 2023 average CPI. EEIO factors incorporate margins which include both direct and indirect emissions associated with production of commodity or industry from cradle to the point of sale.

☒ Average data method

☒ Distance-based method

(7.8.4) Percentage of emissions calculated using data obtained from suppliers or value chain partners

0

(7.8.5) Please explain

Employee home city and primary office location are used to calculate round-trip commute distances. In cases where home or office location is missing, assumptions are set on average commute distance based on location. Where available, badge data is used to calculate frequency of commutes to the office. Where badge data is unavailable, assumptions are made on frequency of commutes based on worker type and location. Assumptions are made on the modes of transportation used for commuting by country based on external research on transportation trends by country. 2024 DEFRA transportation emission factors are used to convert distances traveled by mode of transport to emissions, including WTT and tank-to-wheels (TTW) emissions. Employee home-working emissions are not included.

☒ Methodology for direct use phase emissions, please specify :Includes emissions from equipment equivalent energy use and process chemicals

(7.8.4) Percentage of emissions calculated using data obtained from suppliers or value chain partners

0

(7.8.5) Please explain

Calculated based on FY24 shipped units using the SEMI S23 standard to model Applied semiconductor tools' annual energy consumption across product categories, multiplied by an average 10-year product lifespan. Emissions in this category include the energy, chemicals and gases used by Applied semiconductor tools as well as the ancillary equipment required to power the tools. Also includes emissions from the combustion of natural gas in point-of-use abatement systems where applicable. 2024 country-specific IEA electricity factors are applied based on the country tools were shipped to; IPCC AR6 semiconductor emission factors are used to calculate process gas-related emissions. Calculations do not include emissions from partial or incomplete Semiconductor systems, Applied's Display business (which represent 5% of total net sales in FY24), or from refurbished tools.

☒ Decreased

(7.10.1.3) Emissions value (percentage)

8

(7.10.1.4) Please explain calculation

*The gross global emissions (Scope 1 and 2 market-based) of Applied Materials for this reporting year are 118456 metric tons of CO₂e. Our gross global emissions for the previous reporting year were 120522 metric tons of CO₂e (incorporating FY23 restated Scope 2 Market-based value). The total change in emissions from 120522 to 118456 metric tons CO₂e is -2066, equal to a 2% decrease, according to the formula in the explanation of terms: $(-2066/120522) * 100 = -2\%$. The decrease is mainly driven by a decrease in Scope 2 emissions due to the increase in renewable energy use driven in large part by increased availability of renewable electricity in the Asia Pacific region and Israel. Energy emissions savings from renewable energy assumed as (Location-based Scope 2 - Market-based Scope 2). The change in emissions due to renewable energy consumption is calculated based on the difference of (FY23 Location-based Scope 2 minus FY23 Market-based Scope 2) subtracted from (FY24 Location-based Scope 2 minus FY24 Market-based Scope 2): $(175,667-67,681)-(170,299-71,469)=9,155$ tCO₂e. Emissions value % calculated as 9,155 divided by 120,522 tCO₂e (FY23 total Scope 1 and 2 (Market)).*

Select from:

☒ Increased

(7.10.1.3) Emissions value (percentage)

8

(7.10.1.4) Please explain calculation

This increase is a result of increased business activity and the expansion of our operational footprint. The gross global emissions (Scope 1 and 2 market-based) of Applied Materials for this reporting year are 118,456 metric tons of CO2e. Our gross global emissions for the previous reporting year were 120,522 metric tons of

CO₂e. This means that the total change in emissions is -2,066 metric tons of CO₂e. We estimate that the total change in emissions from FY23 to FY24 is driven by increase in renewable energy consumption (9,155 tCO₂e), other emissions reduction activities (2,664 tCO₂e), and the increase in output (9,753 tCO₂e). The estimated breakdown of changes listed above total to a decrease of 2,066 tCO₂e: (-9155) + (-2,664) + (9,753). Emissions value % of 8% is calculated as 9,753 tCO₂e divided by 120,522 tCO₂e (FY23 total Scope 1 and 2 (Market)).

[Fixed row]

(7.17) Indicate which gross global Scope 1 emissions breakdowns you are able to provide.

Select all that apply

☒ By activity

(7.17.3) Break down your total gross global Scope 1 emissions by business activity.

	Activity	Scope 1 emissions (metric tons CO2e)
Row 1	<i>Mobile Combustion</i>	<i>101</i>
Row 2	<i>Refrigerants</i>	<i>1100</i>
Row 3	<i>Process Emissions</i>	<i>22993</i>
Row 4	<i>Stationary Combustion</i>	<i>26581</i>

[Add row]

(7.20) Indicate which gross global Scope 2 emissions breakdowns you are able to provide.

Select all that apply

☒ By business division

(7.20.1) Break down your total gross global Scope 2 emissions by business division.

	Business division	Scope 2, location-based (metric tons CO2e)	Scope 2, market-based (metric tons CO2e)
Row 1	<i>NAMER (North America)</i>	<i>90280</i>	<i>0</i>
Row 2	<i>APAC (Asia Pacific)</i>	<i>59787</i>	<i>46372</i>
Row 3	<i>EMEA (Europe, the Middle East and Africa)</i>	<i>25600</i>	<i>21309</i>

[Add row]

(7.22) Break down your gross Scope 1 and Scope 2 emissions between your consolidated accounting group and other entities included in your response.

Consolidated accounting group

(7.22.1) Scope 1 emissions (metric tons CO2e)

50775

(7.22.2) Scope 2, location-based emissions (metric tons CO2e)

175667

(7.22.3) Scope 2, market-based emissions (metric tons CO2e)

67681

(7.22.4) Please explain

All Applied owned and operated entities are included in the consolidated accounting group.

All other entities

(7.22.1) Scope 1 emissions (metric tons CO2e)

0

(7.22.2) Scope 2, location-based emissions (metric tons CO2e)

0

(7.22.3) Scope 2, market-based emissions (metric tons CO2e)

0

(7.22.4) Please explain

All Applied owned and operated entities are included in the consolidated accounting group.
[Fixed row]

(7.23) Is your organization able to break down your emissions data for any of the subsidiaries included in your CDP response?

Select from:

☒ No

(7.27) What are the challenges in allocating emissions to different customers, and what would help you to overcome these challenges?

Row 1

(7.27.1) Allocation challenges

Select from:

☒ Doing so would require we disclose business sensitive/proprietary information

(7.27.2) Please explain what would help you overcome these challenges

Some of the information being requested may be considered confidential or sensitive and should not be disclosed to protect the scale and scope of our various business relationships.

Row 2

(7.27.1) Allocation challenges

Select from:

☒ Customer base is too large and diverse to accurately track emissions to the customer level

(7.27.2) Please explain what would help you overcome these challenges

Allocating emissions, even just Scope 1 and 2 emissions, to a specific customer is inherently complex considering the total number of Applied Materials customers, the large variety of products and services supplied to each customer, and the inability to isolate manufacturing and RD process to a particular customer in a given year. Simply taking a proportion of emissions by sales dollars or units would not be an accurate approach. However, we are currently aligning on relevant industry level guidelines through the SEMI SCC Scope 3 working group and will adjust our approach accordingly.

[Add row]

(7.28) Do you plan to develop your capabilities to allocate emissions to your customers in the future?

(7.28.1) Do you plan to develop your capabilities to allocate emissions to your customers in the future?

Select from:

☒ Yes

(7.28.2) Describe how you plan to develop your capabilities

Applied Materials has refined its GHG emission calculations substantially over the past few years. We understand the importance of helping allocate emissions to our key customers to enable collective action on emission reduction measures. Applied Materials is evaluating methods to provide credible, accurate data that does not compromise sensitive information about our various business relationships and is simultaneously engaging through industry groups such as SEMI to evaluate effective approaches to doing so systematically across the industry.

[Fixed row]

(7.29) What percentage of your total operational spend in the reporting year was on energy?

Select from:

☒ More than 0% but less than or equal to 5%

(7.30) Select which energy-related activities your organization has undertaken.

	Indicate whether your organization undertook this energy-related activity in the reporting year
Consumption of fuel (excluding feedstocks)	<i>Select from:</i> <input checked="" type="checkbox"/> Yes
Consumption of purchased or acquired electricity	<i>Select from:</i> <input checked="" type="checkbox"/> Yes
Consumption of purchased or acquired heat	<i>Select from:</i> <input checked="" type="checkbox"/> No
Consumption of purchased or acquired steam	<i>Select from:</i> <input checked="" type="checkbox"/> No
Consumption of purchased or acquired cooling	<i>Select from:</i> <input checked="" type="checkbox"/> No
Generation of electricity, heat, steam, or cooling	<i>Select from:</i> <input checked="" type="checkbox"/> Yes

[Fixed row]

(7.30.1) Report your organization's energy consumption totals (excluding feedstocks) in MWh.

Consumption of fuel (excluding feedstock)

(7.30.1.1) Heating value

Select from:

☒ HHV (higher heating value)

(7.30.1.2) MWh from renewable sources

0

(7.30.1.3) MWh from non-renewable sources

145099

(7.30.1.4) Total (renewable + non-renewable) MWh

145099.00

Consumption of purchased or acquired electricity

(7.30.1.1) Heating value

Select from:

☒ HHV (higher heating value)

owned onsite solar
[Add row]

(7.30.20) Describe how your organization’s renewable electricity sourcing strategy directly or indirectly contributes to bringing new capacity into the grid in the countries/areas in which you operate.

Applied Materials follows two approaches for adding clean energy to the grid: Onsite solar - Applied Materials has invested in onsite solar arrays in China, India, Singapore, Taiwan, and the U.S. Virtual Power Purchase Agreement (VPPA) and PPAs – Applied continued to invest in a VPPA with the White Mesa Wind Project in Texas, which has been operational since October 2021. Applied has also signed a Power Purchase Agreement (PPA) to procure onshore wind energy for Taiwan since 2023 and solar energy for our Israel sites since 2024.

(7.30.21) In the reporting year, has your organization faced barriers or challenges to sourcing renewable electricity?

	Challenges to sourcing renewable electricity
	Select from: <input checked="" type="checkbox"/> Yes, in specific countries/areas in which we operate

[Fixed row]

(7.30.22) Provide details of the country/area-specific challenges to sourcing renewable electricity faced by your organization in the reporting year.

Row 1

(7.30.22.1) Country/area

Select from:
☒ Taiwan, China

(7.30.22.2) Reason why it was challenging to source renewable electricity within selected country/area

Select all that apply

- ☒ Limited supply of renewable electricity in the market
- ☒ Prohibitively priced renewable electricity

(7.30.22.3) Provide additional details of the barriers faced within this country/area

Taiwan's renewable energy market is still limited in scale and unable to meet the total demand needs of buyers in the market. What supply comes online is quickly purchased by much larger buyers, making it difficult and costly for more mid-sized companies like ours to participate. Further, market constraints also drive up the prices of what projects are available. Applied Materials has executed its first PPA in Taiwan, but it covers only a portion of our full load. Applied is also a member of the SEMI Energy Collaborative, which is working to identify solutions to enable accelerated development of renewable energy in challenging APAC markets, including Taiwan. The group is actively sharing and discussing its findings with policymakers and regulators in Taiwan.

Row 2

(7.30.22.1) Country/area

Select from:

- ☒ Singapore

(7.30.22.2) Reason why it was challenging to source renewable electricity within selected country/area

Select all that apply

- ☒ Lack of electricity market structure supporting bilateral PPAs
- ☒ Limited supply of renewable electricity in the market
- ☒ Prohibitively priced renewable electricity

(7.30.22.3) Provide additional details of the barriers faced within this country/area

Singapore's renewable energy supply is extremely limited and constrained by the country's small physical footprint. Onsite solar seems to be the only viable option for most buyers. Applied Materials is developing further plans for such projects where possible; however, they will not deliver the volume of clean energy required by our operations. The only viable options available are either grid interconnection with neighboring countries or importing green hydrogen, which is still a nascent technology. Applied is also a member of the SEMI Energy Collaborative, which is working to identify solutions to enable accelerated development of renewable

energy in challenging APAC markets, including Singapore. The group is actively developing a white paper to outline the findings of this research, and findings will be shared and discussed with local policymakers and regulators in Singapore.

Row 3

(7.30.22.1) Country/area

Select from:

☒ Republic of Korea

(7.30.22.2) Reason why it was challenging to source renewable electricity within selected country/area

Select all that apply

☒ Lack of credible renewable electricity procurement options (e.g. EACs, Green Tariffs)

☒ Limited supply of renewable electricity in the market

(7.30.22.3) Provide additional details of the barriers faced within this country/area

South Korea's market is similarly constrained, with no PPA/VPPA options available to the best of our knowledge. The centrally managed utility actively prevents new developers coming into the market and adding competitive solutions, and it's unclear how much the utility is doing to develop its own sources of renewable power.

Applied is also a member of the SEMI Energy Collaborative, which is working to identify solutions to enable accelerated development of renewable energy in challenging APAC markets, including South Korea. The group is actively sharing and discussing its findings with policymakers and regulators in South Korea.

[Add row]

(7.45) Describe your gross global combined Scope 1 and 2 emissions for the reporting year in metric tons CO2e per unit currency total revenue and provide any additional intensity metrics that are appropriate to your business operations.

Row 1

(7.45.1) Intensity figure

0.00000436

(7.45.2) Metric numerator (Gross global combined Scope 1 and 2 emissions, metric tons CO2e)

118456

(7.45.3) Metric denominator

Select from:

☒ unit total revenue

(7.45.4) Metric denominator: Unit total

27176000000

(7.45.5) Scope 2 figure used

Select from:

☒ Market-based

(7.45.6) % change from previous year

4.18

(7.45.7) Direction of change

Select from:

☒ Decreased

(7.45.8) Reasons for change

Select all that apply

☒ Change in renewable energy consumption

☒ Other emissions reduction activities

☒ Change in output

(7.45.9) Please explain

We have been making progress to decrease our Scope 2 market-based emissions by increasing renewable energy, especially in the Asia Pacific region and Israel. We expanded our total renewable electricity by 11% from FY23 to FY24. We have also implemented emissions reduction activities including lighting upgrades, HVAC equipment upgrades, and energy conservation measures through upgrades to our Building Management Systems. The % change from previous year is calculated using the restated FY23 Intensity figure: $120,522 \text{ tCO}_2\text{e} / \$25,517,000,000 = 0.00000455$. $(0.00000436 - 0.00000455) / 0.00000455 = -4.18\%$ change

Row 2

(7.45.1) Intensity figure

3.318

(7.45.2) Metric numerator (Gross global combined Scope 1 and 2 emissions, metric tons CO2e)

118456

(7.45.3) Metric denominator

Select from:

☒ full time equivalent (FTE) employee

(7.45.4) Metric denominator: Unit total

35700

(7.45.5) Scope 2 figure used

☒ Underway

(7.53.1.82) Explain target coverage and identify any exclusions

The absolute target covers 100% of our company-wide Scope 1 and Scope 2 market-based emissions in the base year and has been validation by SBTi. No exclusions.

(7.53.1.83) Target objective

50% reduction in Scope 1 and Scope 2 (market-based) CO2e emissions by 2030 from 2019 baseline.

(7.53.1.84) Plan for achieving target, and progress made to the end of the reporting year

Our FY24 Scope 1 and Scope 2 (market-based) emissions decreased by 2% from FY23. FY2024 Scope 1 and 2 market-based emissions increased 4% from our FY2019 baseline due to business growth, but have remained relatively flat overall despite an 86% increase in revenue since FY19. Our key strategies to reduce our Scope 2 emissions include achieving 100% renewable electricity globally by 2030 and implementing energy efficiency in our operations. We are making progress to continue to reduce our Scope 2 market-based emissions by expanding our global renewable energy use through PPA/VPPA, leveraging utility renewable programs, and installing onsite solar. We are also implementing energy efficiency measures across our global manufacturing, lab, and office buildings, and designing new facilities to meet high standards for energy efficiency and renewable energy integration. Our Scope 1 reduction efforts are mainly focused on natural gas and process gas emissions at our R&D labs. We are looking at opportunities to implement electric powered systems instead of natural gas for stationary combustion and implement Building Management System and smart utility controls to reduce fuel consumption. We are also looking at improvements in abatement destruction of process gas GHG.

Select from:

☒ Underway

(7.53.2.85) Explain target coverage and identify any exclusions

The target covers all direct product-use emissions from semiconductor products sold in FY24, which covers over 72% of total Scope 3 emissions in the base year. Direct product-use emissions cover the direct energy used to power Applied semiconductor products and do not include other indirect emissions sources such as process gases and sub-fab fuel sources, per SBTi's requirements. Applied Materials' Display products (5% of total sales in FY24) are excluded from Category 11 calculations due to limited data availability.

(7.53.2.86) Target objective

Applied has set a science-based target to achieve a 55% reduction per million USD of value added of Scope 3 Category 11 emissions by 2030 from 2019 baseline for semiconductor products. The objective of this target is to reduce the emissions intensity of Applied's semiconductor products associated with the energy consumed by these products during their use in semiconductor fabs. This target delivers scaled GHG reduction across our customers' fabs, enables customers to meet their own carbon reduction targets and mitigate risks associated with increased energy consumption by fabs and the climate regulations they may be subject to.

(7.53.2.87) Plan for achieving target, and progress made to the end of the reporting year

There are two key components to Applied Materials' plan for achieving this target: 1) Reducing the energy and chemical impact of Applied Materials' products to make them more efficient, and 2) Customers powering our equipment with clean energy. Applied Materials has already established its 3x30 goals and program to make its products more efficient through various means, including improvements in product design, chemical abatement, and optimizing recipes. Many of our customers have established renewable energy and Scope 2 emission reduction goals. Applied Materials has engaged key customers to evaluate collaborative opportunities to expand the use of clean energy at fabs and is participating in industry groups such as the SEMI Climate Consortium, CEBA, and RE100 to ensure we're playing our part to expand clean energy access across our global markets.

☒ Science Based Targets initiative

(7.54.1.18) Science Based Targets initiative official validation letter

Near-Term Approval Letter_SBTi_Question 7.53-7.54.pdf

(7.54.1.19) Explain target coverage and identify any exclusions

The target covers 100% of Applied Materials' electricity load and Scope 2 emissions.

(7.54.1.20) Target objective

By aiming to reach 100% renewable electricity globally by 2030, Applied contributes to grid decarbonization efforts and reduces its related Scope 2 market-based emissions, which helps the company meet customer expectations and mitigate related climate risks both from a physical risk perspective (through the use of onsite solar, for example) as well as transition risks, such as potential future exposure to carbon pricing schemes.

(7.54.1.21) Plan for achieving target, and progress made to the end of the reporting year

Applied Materials has maintained 100% renewable electricity in the U.S. since FY22. Our global renewable electricity rate for FY24 was 73%. We worked with an outside consultant to evaluate the landscape of renewable energy opportunities across our global portfolio and developed a roadmap of procurement mechanisms (i.e., VPPA's, utility programs, onsite projects) to reach 100% renewable energy by 2030. Applied Materials is now focused on executing on this roadmap and

identifying renewable energy solutions in key international markets such as India, Singapore and Taiwan. We are also negotiating a new VPPA in the U.S. that will cover our growing electricity load from new facility construction and expansion.

| <input checked="" type="checkbox"/> Hydrofluorocarbons (HFCs) | |

(7.54.3.10) Explain target coverage and identify any exclusions

The target covers 100% of Scope 1 and 2 emissions and 90% of total Scope 3 emissions, which is comprised of Category 1 and 11 emissions. Applied Materials' Display products (5% of total sales in FY24) are excluded from Category 11 calculations due to limited data availability.

(7.54.3.11) Target objective

Applied's Net Zero 2040 Playbook lays out the objective to reach Net Zero emissions across Scope 1, 2, and 3 by 2040 through value chain collaboration with customers and suppliers to advocate for grid decarbonization, enable customers and suppliers to meet their GHG targets, and enable them to do so through less carbon-intensive products. These efforts drive innovation and unlock new potential revenue pathways, improve the performance of our value chain and mitigate both physical and transition climate-related risks.

(7.54.3.12) Do you intend to neutralize any residual emissions with permanent carbon removals at the end of the target?

Select from:

☒ Yes

(7.54.3.13) Do you plan to mitigate emissions beyond your value chain?

Select from:

☒ No, we do not plan to mitigate emissions beyond our value chain

(7.54.3.14) Do you intend to purchase and cancel carbon credits for neutralization and/or beyond value chain mitigation?

Select all that apply

☒ No, we do not plan to purchase and cancel carbon credits for neutralization and/or beyond value chain mitigation

(7.54.3.15) Planned milestones and/or near-term investments for neutralization at the end of the target

Applied plans to neutralize its residual Scope 1 emissions by 2040 to achieve its target of Net Zero emissions by that year. Applied has already begun to evaluate and perform due diligence on projects that could help achieve this objective, with a focus on quality to ensure the projects deliver actual carbon removals and minimize risks of reversals. We will transparently report on our progress and process once we formally initiate investments in such projects.

(7.54.3.17) Target status in reporting year

Select from:

☒ Underway

(7.54.3.19) Process for reviewing target

Applied updates its Scope 1 and 2 inventory each year and performs 3rd party assurance of the data to ensure accuracy. The data is the basis of monitoring progress towards the target. An internal Net Zero Leadership Council has been established with representatives from the various stakeholder groups that have responsibility for implementing the Net Zero 2040 Playbook. The group meets every 2 months to discuss and monitor progress towards our milestones and objectives. Annual milestones towards Net Zero are defined through the Strategic Review process, and progress is reported to Applied's executives through the QBR process.

(7.55.3) What methods do you use to drive investment in emissions reduction activities?

Row 1

(7.55.3.1) Method

Select from:

☒ Internal finance mechanisms

(7.55.3.2) Comment

Over time we invest in our infrastructure to improve its energy efficiency and reduce associated GHG emissions. Enhancing building systems such as replacing aging heating and cooling systems or retrofitting lighting systems improves operational efficiencies and supports sustainability initiatives. As we purchase or design and build new buildings, we look for ways to incorporate energy efficiency measures, ensuring we are selecting efficient equipment and lighting, optimizing heating and cooling, and evaluating onsite renewable energy opportunities.

☒ Other, please specify :SEMI S23 Guide for Conservation of Energy, Utilities and Materials Used by Semiconductor Manufacturing Equipment

(7.74.1.3) Type of product(s) or service(s)

Other

☒ Other, please specify :More efficient semiconductor manufacturing systems

(7.74.1.4) Description of product(s) or service(s)

Applied Materials offers emissions measurement systems, pollution abatement equipment and consulting services to help our customers reduce their GHG emissions. Our company calculates the energy consumption of our products based largely on SEMI S23 standard and IPCC standards for semiconductor manufacturing, allowing our customers to forecast energy use and emissions related to the operation of our equipment. These data allow our company to work with our customers to improve the environmental performance of our products. The Applied Materials iSystem controller is one example of how our products can help our customers reduce energy and resource consumption in their semiconductor manufacturing operations. In today's semiconductor fab, the focus on saving energy and resources has shifted from facility operations to the subfab, which contains support equipment (pumps, abatement systems, etc.) that can consume around half of the total energy use of the fabrication facility. To reduce energy consumption and conserve natural resources, we offer the Applied Materials iSystem controller, which incorporates a hot standby idle mode in subfab control systems. While monitoring tool operation, the Applied Materials iSystem controller collects valuable data that can be used to calculate resource consumption and GHG emissions. Applied Materials has shipped units used to connect more than 7,000 tools in customer fabs, thereby supporting customer sustainability initiatives.

(7.74.1.5) Have you estimated the avoided emissions of this low-carbon product(s) or service(s)

Select from:

☒ Yes

(7.74.1.6) Methodology used to calculate avoided emissions

Select from:

☒ Estimating and Reporting the Comparative Emissions Impacts of Products (WRI)

(7.74.1.7) Life cycle stage(s) covered for the low-carbon product(s) or services(s)

Select from:

☒ Use stage

(7.74.1.8) Functional unit used

One year of operating of iSystem controller in a semiconductor fab

(7.74.1.9) Reference product/service or baseline scenario used

Customer energy use and emissions without iSystem enabled

(7.74.1.10) Life cycle stage(s) covered for the reference product/service or baseline scenario

Select from:

☒ Use stage

(7.74.1.11) Estimated avoided emissions (metric tons CO2e per functional unit) compared to reference product/service or baseline scenario

84600

(7.74.1.12) Explain your calculation of avoided emissions, including any assumptions

Our methodology focuses on reductions in energy usage, which are converted to emissions reductions based on the regional grid mix. We are basing the avoided emissions number on a public sustainability report from our customer TSMC in 2021 (source: <https://esg.tsmc.com/en/update/responsibleSupplyChain/caseStudy/28/index.html>). While our installed base has grown since then, we are not able to share customer data that has not already been made public by the customer. The information requested on revenue may be considered confidential. We have estimated 1% revenue generated from the low-carbon product but the actual value >0 and <1%.

(7.74.1.13) Revenue generated from low-carbon product(s) or service(s) as % of total revenue in the reporting year

1

Row 2

(7.74.1.1) Level of aggregation

Select from:

☒ Product or service

(7.74.1.2) Taxonomy used to classify product(s) or service(s) as low-carbon

Select from:

(7.74.1.3) Type of product(s) or service(s)

Power

☒ Other, please specify :More efficient semiconductor manufacturing systems

(7.74.1.4) Description of product(s) or service(s)

Awareness of global warming is increasing, and the regulatory push to effect GHG emissions reduction is in full swing. Recognizing this, Applied Materials continues to search for proactive, cost-effective ways of reducing the high global-warming potential (GWP) of the gaseous chemicals used when operating our equipment, such as perfluorocarbon compounds (PFCs), NF3 and SF6. The Applied Materials Aeris-G system is a pre-pump plasma abatement solution that uses less energy by treating the actual process gas volume—a smaller and more concentrated volume than what is treated by post-pump abatement units. The plasma dissociation combined with the low volume of nitrogen in the Aeris-G chamber during abatement minimizes NOx emissions to near zero. The Aeris-G unit operates "on-demand," further reducing operating costs compared to energy-hungry, continuous operation post-pump abatement. The Aeris-G system can be installed within the pump footprint of each chamber. Ideal for existing tool installations, it easily fits into existing exhaust lines and requires only power, nitrogen, cooling water and ultrapure water connections. For new tool installations, Aeris-G saves subfab space, reduces utility and exhaust connections, and minimizes installation costs while improving abatement efficiency.

(7.74.1.5) Have you estimated the avoided emissions of this low-carbon product(s) or service(s)

Select from:

☒ Yes

(7.74.1.6) Methodology used to calculate avoided emissions

Select from:

☒ Other, please specify :Spectral analysis of waste stream to quantitatively measure elimination of GHGs, following EPA methodology

(7.74.1.7) Life cycle stage(s) covered for the low-carbon product(s) or services(s)

Select from:

☒ Use stage

(7.74.1.8) Functional unit used

Per wafer pass through a process tool that is abated through an Aeris-G unit

(7.74.1.9) Reference product/service or baseline scenario used

Process application without any abatement

(7.74.1.10) Life cycle stage(s) covered for the reference product/service or baseline scenario

Select from:

☒ Use stage

(7.74.1.11) Estimated avoided emissions (metric tons CO₂e per functional unit) compared to reference product/service or baseline scenario

0.037

(7.74.1.12) Explain your calculation of avoided emissions, including any assumptions

This avoided emissions calculation depends highly on the wafer process application. AerisG is typically able to reduce emissions because the system provides destruction removal efficiency DRE 95 typical for CF₄ and DRE 99 typical for SF₆, CHF₃, C₃F₈, NF₃, and C₄F₈. This calculation is compared to process tools with no abatement (0 DRE) in place. The information requested on revenue may be considered confidential. We have estimated 1% revenue generated from the low-carbon product but the actual value is >0 and <1%.

(7.74.1.13) Revenue generated from low-carbon product(s) or service(s) as % of total revenue in the reporting year

1

[Add row]

(7.79) Has your organization retired any project-based carbon credits within the reporting year?

Select from:

☒ No

C9. Environmental performance - Water security

(9.1) Are there any exclusions from your disclosure of water-related data?

Select from:

☒ No

(9.2) Across all your operations, what proportion of the following water aspects are regularly measured and monitored?

Water withdrawals – total volumes

(9.2.1) % of sites/facilities/operations

Select from:

☒ 100%

(9.2.2) Frequency of measurement

Select from:

☒ Monthly

(9.2.3) Method of measurement

Utility billing or flow meter that is uploaded to our third-party environmental data management software; estimates are calculated when primary data is not available

(9.2.4) Please explain

Applied Materials tracks the total water withdrawals at all owned facilities and large leased facilities through invoices received from the city, municipality or utility provider. The volume of water withdrawal is then documented monthly, as data is available, using our third-party environmental data management software following the receipt of invoices. Data is consolidated and reviewed at a corporate level twice per year at minimum to check for data accuracy and consistency. Water withdrawals at small leased offices and facilities are estimated annually when invoices are not available, based on building type and size.

Water withdrawals – volumes by source

(9.2.1) % of sites/facilities/operations

Select from:

☒ 100%

(9.2.2) Frequency of measurement

Select from:

☒ Monthly

(9.2.3) Method of measurement

Utility billing or flow meter that is uploaded to our third-party environmental data management software; estimates are calculated when primary data is not available

(9.2.4) Please explain

Applied Materials tracks water volumes by source at all owned and large leased facilities through invoices received from the utility provider, city or municipality providing the water services. We track groundwater, municipal, fire service, and irrigation water when the data is available. Data is entered into our third-party environmental data management software monthly, following the receipt of invoices. Data is consolidated and reviewed at a corporate level twice per year at minimum to check for data accuracy and consistency.

Water withdrawals quality

(9.2.1) % of sites/facilities/operations

Select from:

☒ 76-99

(9.2.2) Frequency of measurement

Select from:

☒ Continuously

(9.2.3) Method of measurement

Water withdrawals quality is monitored at the site level using automatic water samplers and lab testing.

(9.2.4) Please explain

Applied Materials obtains its water from local, municipal-supplied facilities within the cities, counties, states, or countries where we operate. In the US, municipal water meets all standards under National Primary Drinking Water Regulations. In addition, for application-specific uses, we ensure the quality of water through continuous onsite testing to meet our process needs, such as creating de-ionized (DI) and filtered industrial water. This only occurs in relevant facilities, such as lab and manufacturing sites.

Water discharges – total volumes

(9.2.1) % of sites/facilities/operations

Select from:

☒ 100%

(9.2.2) Frequency of measurement

Select from:

☒ Monthly

(9.2.3) Method of measurement

Utility billing or flow meter that is uploaded to our third-party environmental data management software; estimates are calculated when primary data is not available

(9.2.4) Please explain

Applied Materials uses water supplied by municipalities. Following its use, water that cannot be recycled / reused for other purposes (used in chillers, landscaping, etc.) is discharged to the publicly owned treatment facilities for appropriate wastewater processing. For locations with available data (primarily major manufacturing, lab and large office sites), it is entered into our third-party environmental data management software monthly, following the receipt of invoices. Data is consolidated and reviewed at a corporate level twice per year at minimum to check for data accuracy and consistency. For all other locations, including smaller sites and office leased buildings, we estimate water discharge volumes based on building type and size. We are actively working on improving the quality and quantity of water discharge data.

Water discharges – volumes by destination

(9.2.1) % of sites/facilities/operations

Select from:

☒ 76-99

(9.2.2) Frequency of measurement

Select from:

☒ Quarterly

(9.2.3) Method of measurement

POTW (Publicly owned treatment works) Invoices or flow meter and NPDES report depending on site and permit requirements.

(9.2.4) Please explain

Applied Materials discharges to publicly owned treatment works for appropriate wastewater processing. For locations with available data (primarily major manufacturing, lab and large office sites), it is entered into our third-party environmental data management software monthly, following the receipt of invoices. Data is consolidated and reviewed at a corporate level twice per year at minimum to check for data accuracy and consistency. We are actively working on improving the quality and quantity of water discharge data. For US sites, our NPDES permit requires quarterly monitoring.

Water discharges – volumes by treatment method

(9.2.1) % of sites/facilities/operations

Select from:

☒ 100%

(9.2.2) Frequency of measurement

Select from:

☒ Daily

(9.2.3) Method of measurement

POTW Invoices or flow meter and NPDES report depending on site and permit requirements.

(9.2.4) Please explain

For sites that require wastewater pre-treatment, 100% of wastewater is measured and monitored daily by Digital Chart Recorders and Flow Measurement Systems. We are working on incorporating this data into our third-party environmental data management software, which will require quarterly input of monthly wastewater invoices. For all other wastewater, Applied Materials discharges to publicly owned treatment works for appropriate wastewater processing.

Water discharge quality – by standard effluent parameters

(9.2.1) % of sites/facilities/operations

Select from:

☒ 100%

(9.2.2) Frequency of measurement

Select from:

☒ Daily

(9.2.3) Method of measurement

Instrumentation, data logging and monitoring systems, periodic sampling and lab analysis, visual inspection of monitoring equipment and calibration during PMs.

(9.2.4) Please explain

Applied Materials discharges to the publicly owned treatment works for appropriate wastewater processing. 100% of process wastewater complies with the local discharge permits. Where applicable, facilities monitor the quality of all wastewater continuously (daily) through a digital chart recorder and FMS systems to ensure that permitted parameters are effectively met. Every 6 months the discharge pH trend data and effluent sensor calibration records are audited by the regulatory agency. Any out-of-spec effluent parameters result in the diversion of wastewater to a holding tank by the FMS system for further treatment resulting in no discharge of out-of-spec wastewater to the sanitary drain. Local agencies sample our wastewater quarterly to validate our compliance to the discharge permits.

Water discharge quality – emissions to water (nitrates, phosphates, pesticides, and/or other priority substances)

(9.2.1) % of sites/facilities/operations

Select from:

☒ Not relevant

(9.2.4) Please explain

Emissions to water is not considered material to the company at this time, and therefore it is not measured or monitored on a regular basis. We do not anticipate it becoming relevant in the future but will review periodically to ensure this is the case.

Water discharge quality – temperature

(9.2.1) % of sites/facilities/operations

Select from:

☒ Not relevant

(9.2.4) Please explain

The temperature of discharged wastewater is not considered material to the company at this time, and therefore it is not measured or monitored on a regular basis. We do not anticipate it becoming relevant in the future but will review periodically to ensure this is the case.

Water consumption – total volume

(9.2.1) % of sites/facilities/operations

Select from:

☒ 100%

(9.2.2) Frequency of measurement

Select from:

☒ Monthly

(9.2.3) Method of measurement

Using water withdrawal (excluding irrigation water) and water discharge, we subtract the two data points for each facility to calculate total water consumption.

(9.2.4) Please explain

Applied Materials tracks total water consumption at all facilities that have access to both water discharge and withdrawal data through invoices received by the utility provider. Smaller sites have very low consumptions because discharges are equal to withdrawals. Water consumption is estimated in all other sites that lack this data, including leased offices and facilities, based on building type and size. We are actively working on improving the quality and quantity of water consumption data via improved data management of wastewater discharge data. Data is consolidated and reviewed at a corporate level twice per year at minimum to check for data accuracy and consistency.

Water recycled/reused

(9.2.1) % of sites/facilities/operations

Select from:

☒ 76-99

(9.2.2) Frequency of measurement

Select from:

☒ Monthly

(9.2.3) Method of measurement

Utility billing or flow meter that is uploaded to our third-party environmental data management software; estimates are calculated when primary data is not available

(9.2.4) Please explain

Applied Materials implements or considers water reuse, as feasible. Water is reused or recycled in our largest manufacturing facility for use in the chiller systems for building temperature management. Several facilities collect and use rainwater for use in landscaping or non-production needs. Alternative uses for water are considered at our operations, wherever feasible. When water is recycled and/or reused, data is entered into our third-party environmental data management software monthly, following the receipt of invoices.

The provision of fully-functioning, safely managed WASH services to all workers

(9.2.1) % of sites/facilities/operations

Select from:

☒ 100%

(9.2.2) Frequency of measurement

Select from:

☒ Quarterly

(9.2.3) Method of measurement

Water quality sampling and testing where required by local regulatory requirements or health departments.

(9.2.4) Please explain

The accessibility of clean water for all employees is viewed as a fundamental right by Applied Materials. All owned and leased facilities do and are required to have suitable wash services (i.e., bathrooms, sinks) available for use by employees. Our facilities teams are responsible for ensuring consistent access to WASH services to all workers. As water discharge is tracked at each location, there is not a standardized frequency of measurement across the company. We install water filters in common areas and kitchens to improve quality of potable water.

[Fixed row]

(9.2.2) What are the total volumes of water withdrawn, discharged, and consumed across all your operations, how do they compare to the previous reporting year, and how are they forecasted to change?

Total withdrawals

(9.2.2.1) Volume (megaliters/year)

2509

(9.2.2.2) Comparison with previous reporting year

Select from:

☒ Higher

(9.2.2.3) Primary reason for comparison with previous reporting year

Select from:

☒ Increase/decrease in business activity

(9.2.2.4) Five-year forecast

Select from:

☒ Higher

(9.2.2.5) Primary reason for forecast

Select from:

☒ Increase/decrease in business activity

(9.2.2.6) Please explain

Water withdrawal increased by 5% from FY23 to FY24. The increase in water withdrawal is a result of increased business activity and expansion of our operational footprint. In our five-year forecast, we expect a continued increase in overall water withdrawals as a result of increased business activity and expansion of our operational footprint. Water withdrawal metrics have been restated for FY2023 to 2388 megaliters. One of our major sites had a water meter issue resulting in low readings for FY2023. The domestic water value was updated for that site to use the average Domestic Water Withdrawal of FY2020, FY2021, FY2022 and FY2024. Despite the overall increase in absolute water withdrawal, our water intensity metrics, measured both by revenue and by headcount, have remained flat year-over-year.

Total discharges

☒ Higher

(9.2.2.3) Primary reason for comparison with previous reporting year

Select from:

☒ Increase/decrease in business activity

(9.2.2.4) Five-year forecast

Select from:

☒ Higher

(9.2.2.5) Primary reason for forecast

Select from:

☒ Increase/decrease in business activity

(9.2.2.6) Please explain

The increase in water discharge is a result of increased business activity and expansion of our operational footprint. In our five-year forecast, we expect a continued increase in overall water discharge as a result of increased business activity and expansion of our operational footprint. Since water discharge is a function of total withdrawal minus consumption, the increase in discharge is expected given the overall rise in water withdrawal.

Total consumption

(9.2.2.1) Volume (megaliters/year)

553

(9.2.2.2) Comparison with previous reporting year

Select from:

☒ Higher

(9.2.2.3) Primary reason for comparison with previous reporting year

Select from:

☒ Increase/decrease in business activity

(9.2.2.4) Five-year forecast

Select from:

☒ Higher

(9.2.2.5) Primary reason for forecast

Select from:

☒ Increase/decrease in business activity

(9.2.2.6) Please explain

The increase in water consumption from FY23 to FY24 is due to an increase in business activity, specifically at our lab and manufacturing sites that have a higher rate of consumption of water through lab processes or evaporation. Since water consumption is a function of total withdrawal minus water discharge, the increase in discharge is expected given the overall increase in water withdrawal. In our five-year forecast we expect an increase in overall water consumption as a result of increased business activity and expansion of our operational footprint.

[Fixed row]

(9.2.4) Indicate whether water is withdrawn from areas with water stress, provide the volume, how it compares with the previous reporting year, and how it is forecasted to change.

(9.2.4.1) Withdrawals are from areas with water stress

Select all that apply

☒ WRI Aqueduct

(9.2.4.9) Please explain

The volume withdrawn from areas with water stress increased from 282 to 308 megaliters in FY24. The % withdrawn from areas with water stress increased from 11.8% in FY23 to 12.3% in FY24. This increase is mainly driven by increase in water withdrawal at our Israel and Xian China sites due to changes in HVAC cooling tower operations. Overall, Applied Materials operations are not water-intensive. We require water for routine use in office buildings, cooling equipment, labs, etc. However, most operations are not water demanding. Applied Materials takes measures to reduce, reuse and recycle water whenever possible across our operations. The WRI Aqueduct tool is used on an annual basis to assess and determine water-stressed regions and the potential impact on our operations based on water stress severity. Water-stressed regions are documented and opportunities for water management are discussed at the site level.

Select from:

☒ Yes, we have assessed this value chain stage and identified facilities with water-related dependencies, impacts, risks, and opportunities

(9.3.2) Total number of facilities identified

109

(9.3.4) Please explain

Applied Materials uses the RBA's RMI Global Risk Map to review the risk scores of our suppliers. The risk score considers a variety of categories, including water-related risk. Supplier sites are identified based on the water stress index score (which is assessed via the WRI Aqueduct database) – those scoring in the higher risk score threshold that fall within the top 80% of spend are prioritized. Suppliers are familiar with the risk categories that are incorporated in the score because these topics are also included in the RBA Self-Assessment Questionnaire, which suppliers are required to complete before an audit. Approximately 80% of Applied Materials procurement spend is accounted for in these RBA tools.

The overall increase in water withdrawal, discharge, and consumption at the two Xi'an sites was driven by a strategic operational shift to consolidate cooling load onto one building's HVAC system during peak summer temperatures. This led to higher evaporation rates from the cooling towers, which required additional water replenishment. Overall, the annual fluctuations in water usage are largely influenced by the climatic conditions each summer.

(9.3.1.28) Comparison of total consumption with previous reporting year*Select from:*☒ Higher**(9.3.1.29) Please explain**

The increase in overall water withdrawal, discharge, and consumption at the Israel manufacturing and testing cleanrooms was due to an equipment fault in the cooling tower system that caused continuous water inflow, as well as maintenance activities that required draining and refilling multiple cooling towers. Corrective measures have since been implemented to prevent recurrence.

*[Add row]***(9.3.2) For the facilities in your direct operations referenced in 9.3.1, what proportion of water accounting data has been third party verified?****Water withdrawals – total volumes****(9.3.2.1) % verified***Select from:*☒ 76-100**(9.3.2.2) Verification standard used**

Water consumption / use is validated at each location by reviewing monthly invoices received from the local municipality or service provider. This data is then entered into our internal environmental data management system. We receive third party verification from ERM CVS, which uses International Standard on Assurance Engagements ISAE 3000 (Revised). Assurance level is Limited Assurance.

[Add row]

(9.13) Do any of your products contain substances classified as hazardous by a regulatory authority?

	Products contain hazardous substances
	Select from: <input checked="" type="checkbox"/> Yes

[Fixed row]

(9.13.1) What percentage of your company’s revenue is associated with products containing substances classified as hazardous by a regulatory authority?

Row 1

(9.13.1.1) Regulatory classification of hazardous substances

Select from:
☒ Candidate List of Substances of Very High Concern for Authorisation above 0.1% by weight (EU Regulation)

(9.13.1.2) % of revenue associated with products containing substances in this list

Select from:
☒ Don't know

(9.13.1.3) Please explain

Concerns of hazardous substances in products relate chiefly to environmental impacts at end of life (and in EU are regulated by the WEEE and RoHS directives). The manufacturing equipment we sell, including related spare parts, are exempt from these directives pursuant to the large-scale stationary industrial tools exemption. Hazardous substances embedded in our products (i.e., that are in our products) do not present human health risks when the products are used as intended. We are currently assessing our product portfolio in context of hazardous substances defined by international regulatory bodies. Due to the complex nature of our products and the number of parts, this is an ongoing project. We are participating in several technical working groups to address this.

[Add row]

(9.14) Do you classify any of your current products and/or services as low water impact?

(9.14.1) Products and/or services classified as low water impact

Select from:

☒ Yes

(9.14.2) Definition used to classify low water impact

Low water impact products are defined as products that use less water (quantity) than either previous models or similar products on the market.

(9.14.4) Please explain

We currently offer low water impact products and are actively researching ways for our products to use less water during their use phase. Our Reflexion® LK Prime® CMP is currently commercially available and considered to be low water impact because it uses 50% less deionized water compared to an average CMP process. Most recently, we developed the Centura® Sculpta® patterning system, realizing energy savings of more than 15 kWh per wafer and water savings of ~15 liters per wafer. Although we have made strides in developing water-efficient products, most of Applied Materials' equipment has negligible water-related impacts and is inherently "low water impact" - water is chiefly used for cooling purposes and is run through a close-loop system within our tools. Applied Materials is in the process of gathering and modelling further data, including water consumption, as part of our 3x30 initiative; this data will enable a credible approach for qualifying products as low water impact.

[Fixed row]

(9.15) Do you have any water-related targets?

(9.15.2.10) Target status in reporting year

Select from:

☒ Underway

(9.15.2.11) % of target achieved relative to base year

59130

(9.15.2.12) Global environmental treaties/initiatives/ frameworks aligned with or supported by this target

Select all that apply

☒ None, alignment not assessed

(9.15.2.13) Explain target coverage and identify any exclusions

The target covers all annual water usage at Applied's Xi'an, China campus.

(9.15.2.14) Plan for achieving target, and progress made to the end of the reporting year

The facility has been continuously managing water use, implementing a variety of conservation measures including upgrading lab scrubbers, rainwater reclamation for landscaping, and capturing reverse osmosis (RO) reject water for toilet flush use. In addition, the site plans to implement various future water savings projects over the next 3-5 years. Water usage in FY24 was 11% below FY19 levels at the campus.

(9.15.2.16) Further details of target

Aim to reduce water usage at Applied's Xi'an campus (which is located in a high water risk region) below FY19 levels. The water usage target is in m3.

Row 2

(9.15.2.1) Target reference number

Select from:

☒ Target 2

(9.15.2.2) Target coverage

Select from:

☒ Site/facility

(9.15.2.3) Category of target & Quantitative metric

Water withdrawals

☒ Increase in water use met through recycling/reuse

(9.15.2.4) Date target was set

10/01/2023

(9.15.2.5) End date of base year

10/31/2019

(9.15.2.6) Base year figure

(9.15.2.10) Target status in reporting year

Select from:

☒ Underway

(9.15.2.11) % of target achieved relative to base year

350

(9.15.2.12) Global environmental treaties/initiatives/ frameworks aligned with or supported by this target

Select all that apply

☒ None, alignment not assessed

(9.15.2.13) Explain target coverage and identify any exclusions

The target covers the total water recycling rate for Applied's B34 manufacturing site in Austin, TX

(9.15.2.14) Plan for achieving target, and progress made to the end of the reporting year

The facility implemented a system to recycle DI reject water to the site's cooling towers. The site is continuing to optimize the system to increase recycling rate. The site recycled over 3.8 million gallons of water in FY24, achieving a 31% recycling rate vs. 24% in FY19

(9.15.2.16) Further details of target

Aim to increase the water recycling rate at B34 from FY2019 Levels (24%). The target is calculated as the % of total water use at the site that is reused/or recycled at the facility.

C10. Environmental performance - Plastics

(10.1) Do you have plastics-related targets, and if so what type?

(10.1.1) Targets in place

Select from:

☒ Yes

(10.1.2) Target type and metric

Plastic polymers

☒ Reduce the use of polymers with properties that may hinder their reusability, recyclability and disposal

Plastic packaging

☒ Reduce the total weight of plastic packaging used and/or produced

(10.1.3) Please explain

Reduce polybag thickness from 6mil to 4mil, reduce smaller bags from 4mil to 3mil, and eliminate double bagging where unnecessary. Reduce thickness of 5mm PP boxes to 4mm and optimize or remove foam from crate bases where it is not needed. We are also reducing the foam in our crates and have seen a downward trend as mapped from our supplier.

[Fixed row]

(10.2) Indicate whether your organization engages in the following activities.

Production/commercialization of plastic polymers (including plastic converters)

(10.2.1) Activity applies

Select from:

☒ No

(10.2.2) Comment

This activity does not apply to our operations.

Production/commercialization of durable plastic goods and/or components (including mixed materials)

(10.2.1) Activity applies

Select from:

☒ No

(10.2.2) Comment

This activity does not apply to our operations.

Usage of durable plastics goods and/or components (including mixed materials)

(10.2.1) Activity applies

Select from:

☒ Yes

(10.2.2) Comment

We have moisture barrier bags which are a 3 layer laminate of PET, Aluminum and PE. These are not recyclable.

Production/commercialization of plastic packaging

(10.2.1) Activity applies

Select from:

☒ No

(10.2.2) Comment

This activity does not apply to our operations.

Production/commercialization of goods/products packaged in plastics

(10.2.1) Activity applies

Select from:

☒ Yes

(10.2.2) Comment

We double and triple wrap our parts and systems with LDPE plastic bags. These are all virgin resin as it needs to be due to cleanliness concerns.

Provision/commercialization of services that use plastic packaging (e.g., food services)

(10.2.1) Activity applies

Select from:

☒ Yes

(10.2.2) Comment

We double and triple wrap our parts and systems with LDPE plastic bags. These are all virgin resin as it needs to be due to cleanliness concerns.

Provision of waste management and/or water management services

(10.2.1) Activity applies

Select from:

☒ No

(10.2.2) Comment

This activity does not apply to our operations.

Provision of financial products and/or services for plastics-related activities

(10.2.1) Activity applies

Select from:

☒ No

(10.2.2) Comment

This activity does not apply to our operations.

Other activities not specified

(10.2.1) Activity applies

Select from:

☒ No

(10.2.2) Comment

This activity does not apply to our operations.
[Fixed row]

(10.4) Provide the total weight of plastic durable goods and durable components produced, sold and/or used, and indicate the raw material content.

	Please explain
Durable goods and durable components used	<i>Data is unknown at this time.</i>

[Fixed row]

(10.5) Provide the total weight of plastic packaging sold and/or used and indicate the raw material content.

	Please explain
Plastic packaging used	<i>Data is unknown at this time.</i>

[Fixed row]

(10.5.1) Indicate the circularity potential of the plastic packaging you sold and/or used.

	Please explain
Plastic packaging used	<i>Data is unknown at this time.</i>

C11. Environmental performance - Biodiversity

(11.2) What actions has your organization taken in the reporting year to progress your biodiversity-related commitments?

	Actions taken in the reporting period to progress your biodiversity-related commitments
	<i>Select from:</i> <input checked="" type="checkbox"/> No, we are not taking any actions to progress our biodiversity-related commitments, but we plan to within the next two years

[Fixed row]

(11.3) Does your organization use biodiversity indicators to monitor performance across its activities?

	Does your organization use indicators to monitor biodiversity performance?
	<i>Select from:</i> <input checked="" type="checkbox"/> No

[Fixed row]

(11.4) Does your organization have activities located in or near to areas important for biodiversity in the reporting year?

	Indicate whether any of your organization's activities are located in or near to this type of area important for biodiversity	Comment
Legally protected areas	Select from: <input checked="" type="checkbox"/> No	<i>Applied does not operate near this type of area</i>
UNESCO World Heritage sites	Select from: <input checked="" type="checkbox"/> No	<i>Applied does not operate near this type of area</i>
UNESCO Man and the Biosphere Reserves	Select from: <input checked="" type="checkbox"/> No	<i>Applied does not operate near this type of area</i>
Ramsar sites	Select from: <input checked="" type="checkbox"/> No	<i>Applied does not operate near this type of area</i>
Key Biodiversity Areas	Select from: <input checked="" type="checkbox"/> No	<i>Applied does not operate near this type of area</i>
Other areas important for biodiversity	Select from: <input checked="" type="checkbox"/> No	<i>Applied does not operate near this type of area</i>

[Fixed row]

C13. Further information & sign off

(13.1) Indicate if any environmental information included in your CDP response (not already reported in 7.9.1/2/3, 8.9.1/2/3/4, and 9.3.2) is verified and/or assured by a third party?

	Other environmental information included in your CDP response is verified and/or assured by a third party
	Select from: <input checked="" type="checkbox"/> Yes

[Fixed row]

(13.1.1) Which data points within your CDP response are verified and/or assured by a third party, and which standards were used?

Row 1

(13.1.1.1) Environmental issue for which data has been verified and/or assured

Select all that apply

☒ Climate change

(13.1.1.2) Disclosure module and data verified and/or assured

- Environmental performance – Climate change
- ☒ Electricity/Steam/Heat/Cooling consumption
 - ☒ Fuel consumption
 - ☒ Renewable Electricity/Steam/Heat/Cooling consumption

- ☒ Other data point in module 7, please specify :Energy intensity [MWh/employee and MWh/million dollars of revenue]

(13.1.1.3) Verification/assurance standard

General standards

- ☒ ISAE 3000

(13.1.1.4) Further details of the third-party verification/assurance process

Additional metrics that were verified by Third-Party include: Total energy consumption MWh, Total electricity consumption MWh, Total renewable energy consumption, MWh Percentage renewable electricity consumption, Scope 1 and 2 emissions intensity by revenue, Scope 1 and 2 emissions intensity by employee headcount; historical restatements of FY23 Total Scope 2 (market-based), FY23 GHG intensity - Total Scope 1 & Scope 2 in MT CO2e per employee and per million dollars of revenue, and Total Scope 3 GHG emissions for FY19, FY22, FY23.

(13.1.1.5) Attach verification/assurance evidence/report (optional)

ERM CVS – Limited Assurance Report for Applied Materials FY24 CDP_FINAL.pdf

Row 2

(13.1.1.1) Environmental issue for which data has been verified and/or assured

Select all that apply

- ☒ Water

(13.1.1.2) Disclosure module and data verified and/or assured

Environmental performance – Water security

- ☒ Volume withdrawn from areas with water stress (megaliters)
☒ Water withdrawals– total volumes

(13.1.1.3) Verification/assurance standard

General standards

☒ ISAE 3000

(13.1.1.4) Further details of the third-party verification/assurance process

Additional metric that was verified by Third-Party includes historical restatement of FY23 Total Water Withdrawal.

(13.1.1.5) Attach verification/assurance evidence/report (optional)

ERM CVS – Limited Assurance Report for Applied Materials FY24 CDP_FINAL.pdf
[Add row]

(13.2) Use this field to provide any additional information or context that you feel is relevant to your organization's response. Please note that this field is optional and is not scored.

	Additional information
	N/A

[Fixed row]

(13.3) Provide the following information for the person that has signed off (approved) your CDP response.

(13.3.1) Job title

President and Chief Executive Officer

(13.3.2) Corresponding job category

Select from:

☒ Chief Executive Officer (CEO)

[Fixed row]

(13.4) Please indicate your consent for CDP to share contact details with the Pacific Institute to support content for its Water Action Hub website.

Select from:

☒ Yes, CDP may share our Disclosure Submission Lead contact details with the Pacific Institute
