Excellence in engineering and proven experience

With a coating speed of up to 20 meters per second, unparalleled productivity and winner of numerous design awards, the TopMet represents true excellence in engineering. Applied Materials' web coating products with more than 60 years of experience and over 700 systems installed worldwide, lead the market of roll-to-roll vacuum coating and metallizing solutions.

TopMet™

Offers two advanced AlOx processes and option for organic top coating

The AlOx-ECON process minimizes capital cost while producing 15-20 nanometer thin, clear barrier coatings on PET substrates.

The AlOx-HAD process is adopting a plasma-assisted deposition, developed in conjunction with the Fraunhofer Institute in Germany, depositing typically 10 nanometer thin layers with excellent barrier properties on a wide range of plastic packaging films.

Both processes integrate Applied Materials' robust patented evaporator boat design, winding system, and in-line control system for layer thickness monitoring. Together, these innovations generate uniform AlOx layers with higher barrier performance and higher transparency.

TopMet™ CLEAR

For non-metalized structures in one path

Our vacuum metallizer features inline printing of both grey-scale and patterned structures on polymeric substrates and paper, eliminating a process step while at the same time enabling differentiated packaging.

TopMet™ IP Inline Printing

For advanced electron beam coatings

A wide variety of different metals and oxides can be evaporated with Applied's high-power electron beam evaporation. This process offers the highest coating speed of all vacuum coating processes. For high coating thickness uniformity a closed-loop inline control system both in transverse and machine direction is mandatory. This requirement is fulfilled with ESCOSYS™ in combination with the advanced inline measurement system.

TopBeam™

Evaporation system based on induction heated crucibles

The TOPCOIL™ platform complements Applied Materials' evaporation portfolio with induction heated crucible technology. This is a solution for applications demanding aggressive, low defect performance and also enables depositing a wide range of materials.

TopCoil™
Applied Materials is a leading supplier of advanced roll-to-roll vacuum coating systems used to deposit thin films for flexible electronics, packaging and advanced technology applications.

We offer a broad portfolio of equipment solutions that address a wide variety of applications for the evolving packaging industry. Installed throughout the world, our roll-to-roll vacuum coating product line sets the industry standard for depositing uniform flexible barrier films with superior gas/moisture barrier properties that maximize freshness and extend shelf life of consumer goods.

To meet the increasing demand for new flexible packaging materials and precision processing, Applied Materials’ deposition systems allow the customization and engineering of packaging materials tailored for exacting barrier performance requirements with the lowest consumption of resources, raw materials and energy. Using our systems enables smarter packaging options supporting the growing market for compact solutions like lightweight pouch systems to replace e.g. rigid containers, thereby reducing transport and storage costs and environmental impact.

**Standard Applications**
(Flexible Packaging)

- TopMet™ for flexible barriers Al metallic or AlOx transparent
- TopMet™ IP for inline printing

**New Advanced Applications**
(Flexible Transparent Packaging)

- TopMet™ CLEAR for transparent AlOx Barrier layers (deposited with or without high power plasma assistance)
- TopMet™ CLEAR with Top Coat for enhanced barrier performance on flexible substrates
- TopBeam™ for high speed advanced coatings for different types of transparent (oxide) coatings on packaging materials
